CLIVET

GUIDE **2021**

PRODUCTS AND SYSTEMS

VRF

Inspiring Solutions since 1989

This document is dedicated to those looking for VRF solutions for heating, air conditioning, air renewal and air purification.

Solutions able to increase the comfort level in the places where we live, work and spend our free time.

Complete year round systems, focused on substantial energy savings and less dependency on the fossil fuels used by traditional HVAC solutions, such as natural gas or oil.

INSPIRING SOLUTIONS

This Guide is printed every year and presents all Clivet's products with the aim of providing a basis for decisions and evaluations.

More detailed information, updated regularly, is available in the “SYSTEMS AND PRODUCTS” area at www.clivet.com, www.clivetlive.com and on Clivet Apps, where they can be downloaded free of charge.

ALWAYS READY FOR THE FUTURE

INSPIRING SOLUTIONS

In over 30 years of working on the design, manufacturing and distribution of air conditioning and handling systems, combining high efficiency with minimal environmental impact, Clivet has developed solutions to ensure sustainable comfort and the well-being of people and the environment.
Designing and developing year-round air conditioning solutions with innovative technologies are part of Clivet's DNA, which means the company has always been ready for the future.

COMFORT FOR THE PLANET & PEOPLE

OUR VALUES

IN THE RESIDENTIAL, COMMERCIAL AND INDUSTRIAL SECTORS

Increasing comfort, saving energy and providing customers with the best value for the entire life cycle of the system: these are the values that inspire our systems for the residential, services and industrial sectors.

Why choose the VRF system

HIGH EFFICIENCY

Thanks to a full DC inverter range (compressors, fans) and electronic controls that allow only the power actually required by the individual zones to be supplied, the VRF system offers high efficiency and energy savings.

SYSTEM FLEXIBILITY AND MODULARITY

The VRF system is able to meet the demands of air conditioning from small to large buildings, thanks to a wide range of units and extended cooling lengths. The system architecture is designed to be totally modular, combining units and controls according to specific needs. The automatic unit addressing function, available as standard, greatly simplifies and speeds up the installation phase.

WIDE OPERATION RANGE AND HIGH RELIABILITY

The correct functioning of the system is ensured up to -25 ° C in heating and from -15 ° C to 52 ° C in cooling. Reliability is guaranteed by rigorous tests in the production phase and by multiple functions, including the rotation of the compressors for balancing the operating time and the backup in case of emergency in multi-module systems.

LOCAL OR REMOTE MULTI-ZONE CONTROL

The wide range of control systems makes it possible to take full advantage of the total independence of the terminals located in the different areas of the building, based on the specific requests. Commands are available for local management (individual units or centralized), or remotely (via cloud from a smartphone, tablet or PC).

OUTDOOR UNITS

WIDE RANGE

✓ Capacity from 8 to 45 kW for Mini VRF and from 25 to 270 kW for VRF, in order to cover the maximum number of applications

HIGH SEASONAL EFFICIENCIES

✓ Maximum efficiencies at most frequent load conditions

WIDE OPERATING RANGE

✓ With special attention to cooling and heating guaranteed at low temperatures, thanks to the full DC inverter range

INTELLIGENT DEFROSTING

✓ Saves energy by adjusting duration and frequency

NIGHT SILENT MODE

✓ Several silent modes increase quietness and internal comfort

ROTATION AND BACKUP FUNCTION

✓ In systems with several external modules, the different units are used in such a way as to balance the operating hours, extending the useful life of the entire system. Similarly, in the event of a failure of one of the modules, the system compensates for the malfunction by automatically activating the others, allowing continuity of service

AUTO ADDRESSING

✓ The outdoor unit is designed to assign addresses to system units automatically, simplifying installation

INDOOR UNITS

IDEAL FOR ANY ENVIRONMENT:

✓ Offices, Restaurants, Residential, Hotels, Commercial areas

HIGH PERFORMANCE

✓ High efficiency DC inverter fans and heat exchangers

STANDARD AIR FILTER

✓ G2 class washable filter designed for easy removal

AUTOMATIC RESTART

✓ Restart 3 minutes after power recovery with the latest operating settings

INTEGRATED ELECTRONIC EXPANSION VALVE

✓ Precise regulation of refrigerant in the heat exchanger

WIDE RANGE

✓ more than 100 models in 14 different types from 1,7 to 56 kW

7 FAN SPEEDS AVAILABLE

✓ All series are adjustable through 7 fan speeds to ensure maximum comfort

HRV AND PRIMARY AIR

WIDE RANGE AND MAXIMUM EFFICIENCY

✓ Several series of units complete the range to combine air conditioning with air renewal, in order to guarantee maximum healthiness of the environment with particular attention to energy efficiency

COMPLETE INTEGRATION

✓ All the units are fully integrated in the range of control systems, for maximum immediacy in managing the system

CONTROL SYSTEMS

LOCAL OR REMOTE CONTROLS

✓ A wide range of commands allows you to manage different zones locally or remotely independently depending on your specific needs

A CONTROL FOR EVERY APPLICATION

✓ Multiple solutions are available: wireless and wired remote controls, centralised touchscreen controls, interfaces for cloud control from smartphones, tablets or PCs, supervision systems for centralised management of multiple systems in different locations and BMS interfaces for integration of the VRF system with third party equipment

CLIVET-MIDEA PARTNERSHIP, THE WORLD'S BEST TECHNOLOGY

Thanks to the alliance with **Midea**, Clivet works closely with the **world's second largest producer of VRF** and the **world's number one exporter of air conditioning units,** which can boast:

- ✓ **Over 20 years** of evolution of the VRF System;
- ✓ **7 generations** of product technology;
- ✓ More than **400 patents** related to VRF;
- ✓ More than **420.000 outdoor units sold** in 2020;
- ✓ More than **980 million Euros in turnover** in 2020 for VRFs.
- ✓ World's No.1 China-based VRF exporter in 2018

Clivet can therefore offer the **widest range of capacities on the market** (from 7 kW/2.5 HP to 270 kW/96 HP) with Full DC inverter technology for energy saving and maximum flexibility of application thanks to the extended connectable piping (up to a maximum of 1000 m). These features provide significant benefits:

- ✓ **Reduction of time and costs**. Thanks to the simplified installation compared to traditional VRF systems, extra costs such as outdoor unit modules, additional piping, larger welds and longer installation times are eliminated;
- ✓ The considerable capacity range reduces the overall dimensions by up to 25%.

A Group Company of Midea

Certifications and safety

Clivet products comply with applicable product directives, as required in all EU countries, in order to guarantee an appropriate level of safety.

With the aim of providing Customer satisfaction, Clivet S.p.A. has supplemented and certified its Quality, Environment and Safety Management Systems, in accordance with the ISO 9001, ISO 14001 and ISO 45001 International Standards.

Clivet is committed in promoting the green building principles and has become a member of GBC Italia. This organization collaborates with USGBC, the U.S. nonprofit organization that promotes worldwide the LEED® system of independent certification.

In 2015, Clivet became a partner of CasaClima. As a result, Clivet is now part of a network of companies renowned for their technical expertise and constant focus on sustainable home management.

Clivet participates in the EUROVENT "Liquid Chilling Packages and Heat Pumps", "Rooftops", "Air Handling Units" and "VRF" Certification programmes. The products concerned feature in the EUROVENT guide to certified products and on the website www.eurovent-certification.com. The programmes apply to water chillers up to 1500 kW, to rooftops up to 100 kW, to air handling units and to VRF up to 100 kW.

The wide range of Clivet products and complete systems comply with the requirements of the implementing measures for ErP (Energy related Products) Directives 2009/125/EC (Eco-design) and 2010/30/EU (Energy labelling), whose purpose is to reduce the energy consumption of products for heating, cooling, ventilation and hot water production, encouraging the user towards energy-efficient choices.
Directives 2009/125/EC and 2010/30/EU include the following Regulations: (EU) 206/2012, (EU) 626/2011; (EU) 811/2013, (EU) 812/2013, (EU) 813/2013, (EU) 814/2013; (EU) 1253/2014, (EU) 1254/2014; (EU) 2016/2281.

MINI VRF

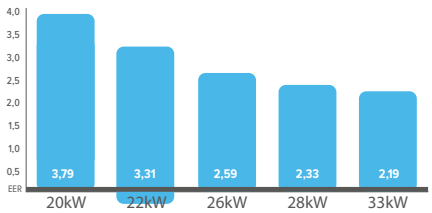
MSAN-XMi 80M÷450T

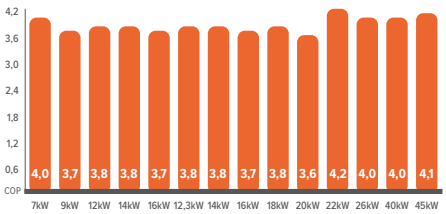
DC INVERTER | AIR | R-410A | CONTROL SYSTEM SPLIT VRF | EUROVENT CERTIFIED PERFORMANCE

Compact design heat pump outdoor units

High efficiency

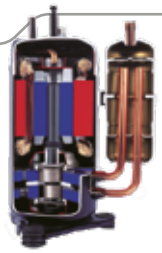
HIGH EER AND COP VALUES





ALL DC INVERTER COMPRESSORS

The DC inverter compressor adopts innovative design and numerous high performance key parts which can reduce power consumption by 25%.

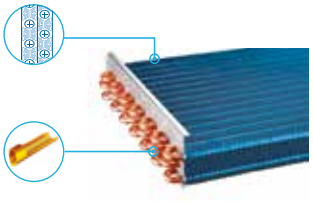


Compressor (Twin Rotary) structure

1. Highly Efficient DC Motor:
   - Creative motor core design
   - High density neodymium magnet
   - Concentrated type stator
   - Wider operating frequency range
2. Better balance and Extremely Low Vibration:
   - Twin eccentric cams
   - 2 balance weights
3. Highly Stable Moving Parts:
   - Optimal material matching rollers and vanes
   - Optimize compressor drive technology
   - Highly robust bearings
   - Compact structure

HIGH EFFICIENCY HEAT EXCHANGER

Newly designed window type fins enlarge the heat exchange area and decrease air resistance, enhance heat exchange performance and save more energy.
Hydrophilic fins and internally threaded copper pipes optimize heat exchange efficiency.



NEW GRILL DESIGN

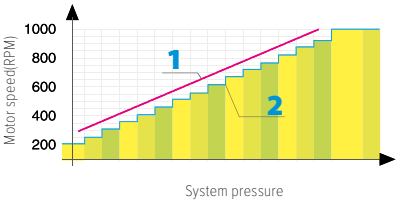
Optimally designed fan shape and newly designed grill ensure both safety and air volume.

Newly designed grill

Powerful Large Propeller

ALL DC FAN MOTORS

Fan speed is controlled according to the system pressure and system load, minimizing energy consumption.



1. DC inverter stepless adjustment
2. AC inverter multistep adjustment

Wide application range

WIDE CAPACITY RANGE

The outdoor units' capacity range from 7,2 kW to 45 kW which is ideal for small offices, villas, apartment and shops, making it perfect for commercial and residential application.

7,2/9,0 kW

12/14/16/18 kW

20/22,4/26 kW

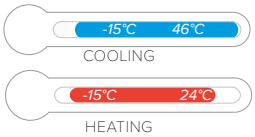
40/45 kW

WIDE RANGE OF INDOOR UNITS

Clivet provides 14 types and more than 100 models of VRF indoor units to meet varied customer requirements in a wide range of locations including shopping malls, hospitals, office buildings, hotels and airports.

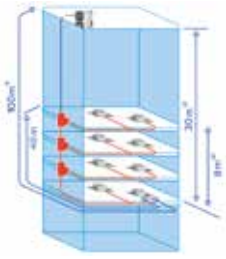
WIDE OPERATION RANGE

Mini VRF Series operates stably under extreme conditions, ranging from -15°C to +46°C
(200T/260T sizes)



LONG PIPING LENGTH

The Mini VRF provides a total piping length possibility of 250 m, a maximum height difference between outdoor and indoor units of 30 m. The height difference between indoor units can be up to 8 m. These generous allowances facilitate an extensive array of system designs.



(1) Longest actual piping length
(2) Leveldifferencebetweenindoorunitsandoutdoor units
(3) Level difference between indoor units

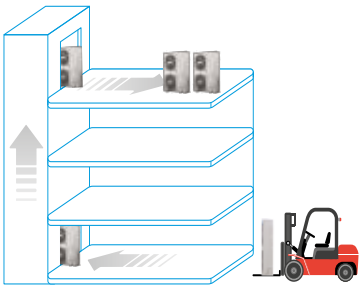
Easy installation and service

EASY INSTALLATION

Easy installation: No special area is required for outdoor units.
Easy transportation: All outdoor units can be transported by elevator, which greatly simplifies installation and reduces time and labor.

The Mini VRF system's indoor and outdoor units are almost as easy to install as residential airconditioning systems, making them ideal for small offices and shops.



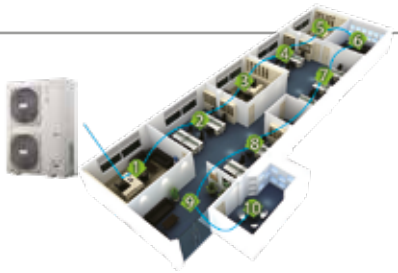
SPACE SAVING DESIGN

The Mini VRF units are slimmer and more compact, resulting in significant savings in installation space.

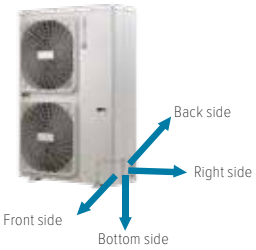
In some large residential and light commercial areas, such as villas, restaurants, usually it need more than one indoor unit, which in turn requires multiple outdoor units.

AUTO ADDRESSING

Outdoor unit can distribute addresses for indoor units automatically.
Wireless and wired controllers can query and modify each indoor unit's address.



FOUR-WAY PIPING CONNECTION

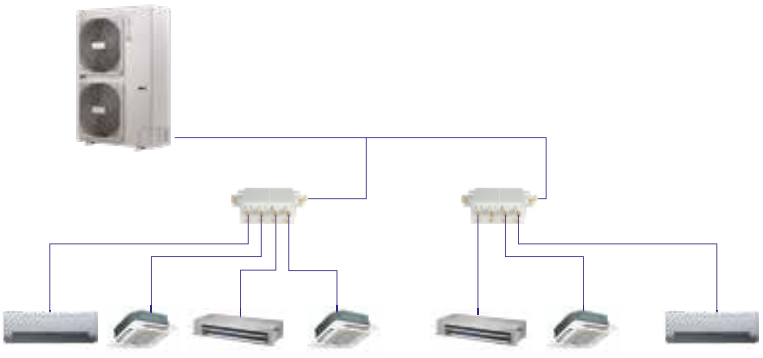


A four-direction space is available for connecting pipes and wiring in various installation sites.

HEADER CONNECTION AVAILABLE THROUGH BRANCH BOX

Easier and safer installation thanks to a branch box that simplifies piping work and the adoption of screw connection.
Both left and right pipe flare connections from outdoor unit to branch box are dedicated, which greatly simplies field installation.

Branch Box FQT4-01



*compatible up to size 180T. For the whole Mini VRF series it is however possible to use the manifolds 4 or 8 connections DXFQT4-01 / DXFQT8-01.

Power supply		V/Ph/Hz	400/3/50+N								

EER and COP according EN 14511 regulation, SEER and SCOP according EN14825 regulation

(1) Indoor temperature 27°C DB/19°C WB; Outdoor temperature 35°C DB/24°C WB. Interconnecting piping length is 7,5 m, level difference is zero.

(2) Indoor temperature 20°C DB/15°C WB; Outdoor temperature 7°C DB/6°C WB. Interconnecting piping length is 7,5 m, level difference is zero.

(3) Total Capacity Index = indoor unit total capacity/outdoor unit capacity

(4) ROT = rotary compressor

(5) Sound values are measured in a semi-anechoic room, at a position 1m in front of the unit and 1m above the floor.

VRF MV6

MV6-XMi 252T÷2700T

DC INVERTER | AIR | R-410A | CONTROL SYSTEM: SPLIT, VRF

EUROVENT CERTIFIED PERFORMANCE

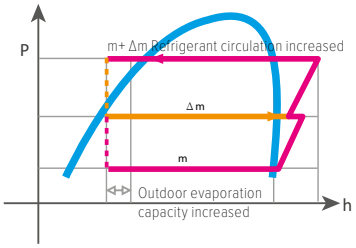
Very high efficiency heat pump outdoor units

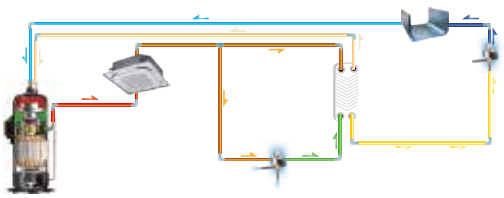
3 Unique Innovations

EVI (ENHANCED VAPOR INJECTION) COMPRESSOR

Thanks to the vapor injection DC inverter compressor, the MV6 series can run heating mode stably down to -25°C, furthermore strongly increasing the heating capacity especially at low ambient temperature. Compressor is designed to run at 7% modulation minimum, highly improving system efficiency at part load operation.

Vapor injection
DC inverter compressor

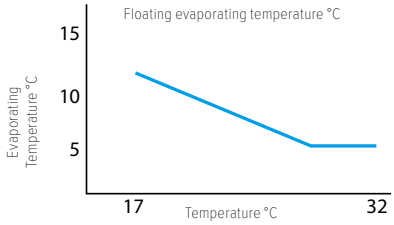




EMS (ENERGY MANAGEMENT SYSTEM)

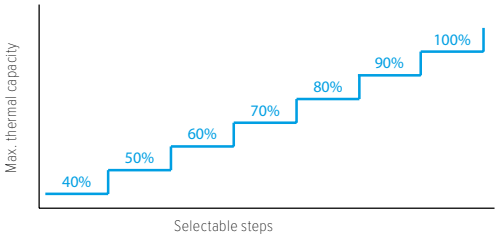
Floating refrigerant temperature for balancing comfort and efficiency

The evaporating temperature (in cooling) and condensing temperature (in heating) are automatically adjusted according to both indoor and outdoor temperature to maximize the comfort and energy efficiency.



Capacity output limitation for shortage of electricity

With the integration of EMS, for projects with limited electricity supply, MV6 can be set to output 40-100% capacity.



MR. DOCTOR

Force cooling /heating commissioning: force cooling or force heating operation can check the system comprehensively and quickly.

Self-diagnosys: all new diagnosis software to monitor all operating parameters and detailed information.

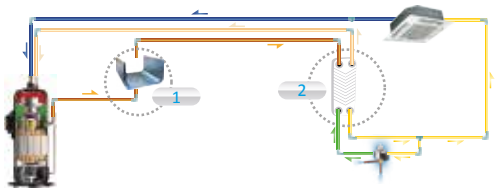
Automatic data backup: automatic data backup of last 30 minute's operation record.

Auxiliary PCB for quick access: placed on side column of the unit, it provides easy access to LED display and main settings without removing the front panel.

High Efficiency

PHE (PLATE HEAT EXCHANGER) SUBCOOLING

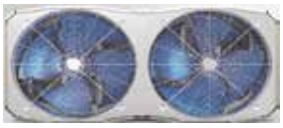
Plate Heat Exchanger as a secondary intercooler boosts up refrigerant subcooling and improves 10% energy efficiency.



HIGH EFFICIENCY G-TYPE HEAT EXCHANGER

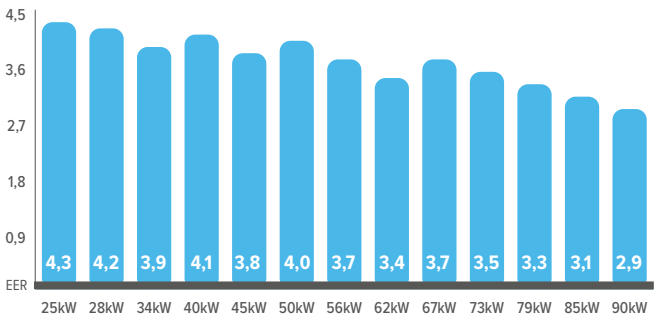
24-32HP units use high efficiency 3-rows G-type heat exchanger which heat exchange area is 1,5 times than 22HP unit. The 24-32HP units also use super big size fan which diameter is up to 750mm.

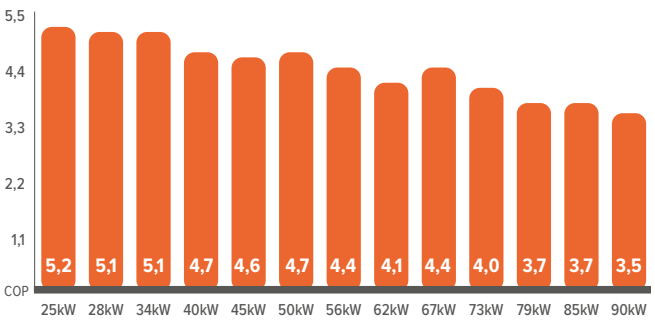
3-rows G-type heat exchanger



Super big size fan

HIGH EER AND COP VALUES





Wide Application Range

WIDE CAPACITY RANGE

The whole lineup of VRF MV6 is from 8HP to 96HP in 2HP increasement with the world's largest single refrigerant system capacity up to 96HP.

8/10/12 HP
(with single fan)

14/16 HP
(with single fan)

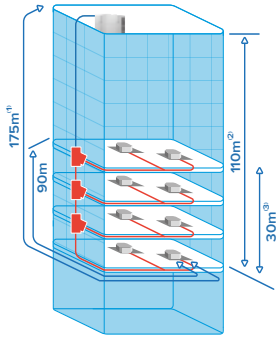
18/20/22 HP
(with dual fans)

24/26/28/30/32 HP
(with dual fans)

16-64HP

24-96 HP

LONG PIPING CAPABILITY



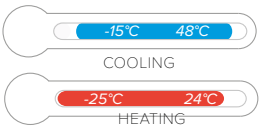
Piping length	Capability
Total piping length	1 000 m
Longest length - actual (equivalent)	175 m (200 m)
Longest length after first branch	90 m*
Largest height difference between indoor and outdoor units - ODU up (down)	90 m (110 m)
Largest height difference between indoor units	30 m

* The longest length after first branch is 40m as standard but can be extended to up to 90m under certain conditions. Please refer to technical manual for further information.

(1) Longest actual piping length
(2) Level difference between indoor units and outdoor units
(3) Level difference between indoor units

WIDE OPERATION RANGE

VRF MV6 can operate in a wide ambient temperature range.
It can operate stably from -15°C up to 48°C in cooling mode and from -25°C to 24°C in heating mode.

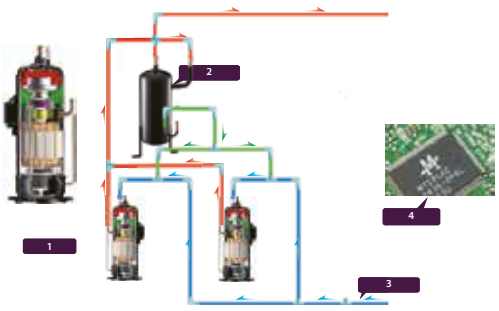


High Reliability

PRECISE OIL CONTROL TECHNOLOGY

Four stages of oil control technology ensure all outdoor compressor oil is always kept at a safe level, eliminating any compressor oil shortage problems.

(1) Compressor internal oil separation.
(2) High-efficiency centrifugal oil separator (with separation efficiency of up to 99%) ensures that oil is separated from the discharge gas and returned to the compressors in a timely fashion.
(3) Oil balance pipes between compressors ensure even oil distribution to keep compressors running normally.
(4) Auto oil return program monitors the running time and system status to ensure reliable oil return.



DUTY CYCLING

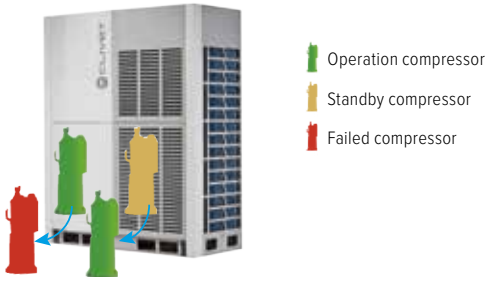
Duty cycling equalizes the running time of the outdoor units in a multiple-unit system and of the compressors in each unit, significantly extending compressor lifespan.

1st cycle

2nd cycle

3rd cycle

BACKUP OPERATION



Compressor backup

In one unit with two compressors, if one compressor is failed, the other compressor can be backup instead of the failed one to maintain up to 4 days interim capacity, allowing time for maintenance or repair while comfort remains guaranteed.

In a multi-unit system, if one module fails, the other modules provide backup so that the system can continue operating.

ANTI-CORROSION PROTECTION

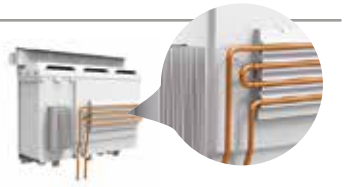
Outdoor units are given anti-corrosion treatment for non-extreme conditions as standard and can also be customized with heavy anti-corrosion treatment on main components for surface protection against corrosive air, acid rain and saline air (for installations in coastal regions) to extend overall useful life. The integrity of the anti-corrosion treatment is ensured by subjecting major components and parts to salt mist testing, moisture and heating testing and light aging testing.

Please contact your local dealer for further information about customization price and availability.

- Fan motor
- Painted sheet metal
- Screws / Bolts / Gaskets
- Heat exchanger aluminum foil
- Heat exchanger copper pipe
- Electric Control Box Case

REFRIGERANT COOLING PCB

The MV6 series uses refrigerant cooling technology to cool the electric control box. It decreases the average temperature of electrical control components by about 8 degrees, guaranteeing the stable and safe running of the control system.



AUTO SNOW-BLOWING FUNCTION

The innovatively designed auto snow-blowing function enables the outdoor unit to prevent the accumulation of snow by itself.

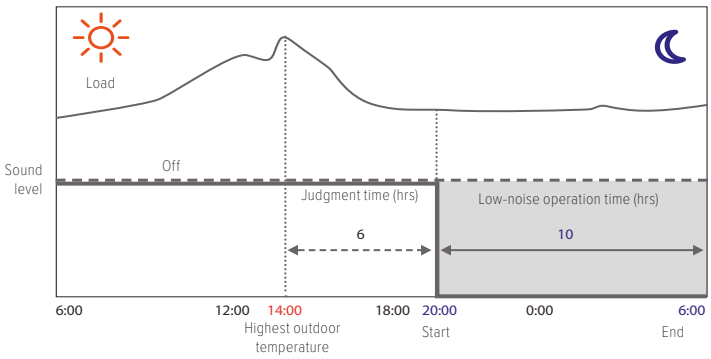
DUST-CLEAN FUNCTION

The innovatively designed dust-clean function enables the outdoor unit to prevent the dust by itself.

Enhanced Comfort

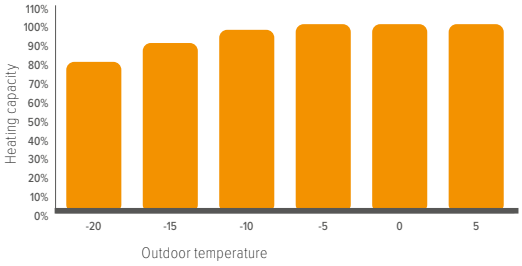
NIGHT SILENT MODE

The night silent mode feature includes various scheduling options that can be used to reduce noise levels when low noise operation is required: only during night hours or continuously, and with different noise reductions levels limiting only maximum fan speed or compressor speed also.



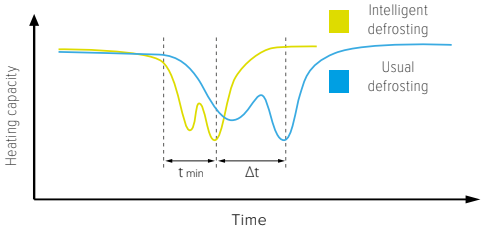
ENHANCED HEATING CAPACITY

Thanks to the vapour injection DC Inverter compressors, heating capacity can achieve 100% output when the ambient temperature is down to -5°C and 90% output when ambient temperature is down to -15°C.



INTELLIGENT DEFROSTING TECHNOLOGY

The intelligent defrosting program calculates the time required for defrosting according to the actual system status, eliminating heat losses from unnecessary defrosting. A specialized defrosting valve reduces time required for defrosting to as little at four minutes.



MULTIPLE PRIORITY MODE SETTINGS AVAILABLE

Operating mode priority can be set among different modes (automatic, cooling priority, VIP indoor unit, heating only, cooling only) to satisfy every specific user's need. Setting can be performed on outdoor unit directly or by centralized controller.

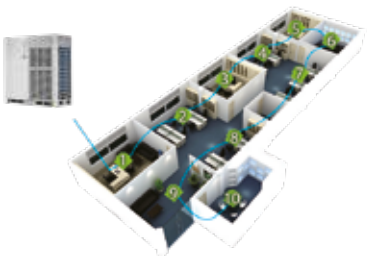
SMART INPUT/OUTPUT CONTACTS

Convenient connectors are available as standard on unit PCB, to realize some convenient operations on field with other building appliances depending on users' needs. Available contacts are heating/cooling switch as input and alarm as output.

Easy Installation and Service

AUTO ADDRESSING

Outdoor unit can distribute addresses to indoor units automatically. Remote and wired controllers can be used to query or modify each indoor unit's address.



AUTOMATIC REFRIGERANT CHARGING FUNCTION

Automatic refrigerant charging function make the installation and service easier and more efficient, automatically collecting refrigerant from the tank and stopping the operation when exact refrigerant charge is done.

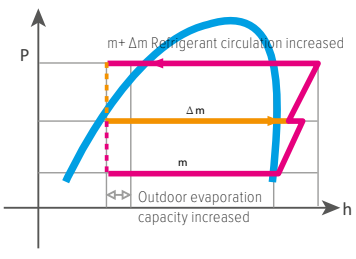
High efficiency heat pump outdoor units

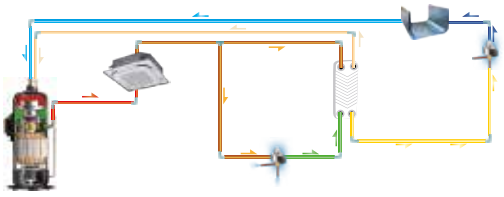
3 Unique Innovations

EVI (ENHANCED VAPOR INJECTION) COMPRESSOR

Thanks to the vapor injection DC inverter compressor, the MV6i series can run heating mode stably down to -25°C, furthermore strongly increasing the heating capacity especially at low ambient temperature. Compressor is designed to run at 7% modulation minimum, highly improving system efficiency at part load operation.

Vapor injection
DC inverter compressor

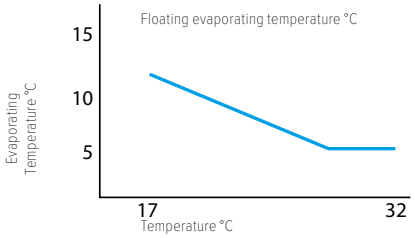




EMS (ENERGY MANAGEMENT SYSTEM)

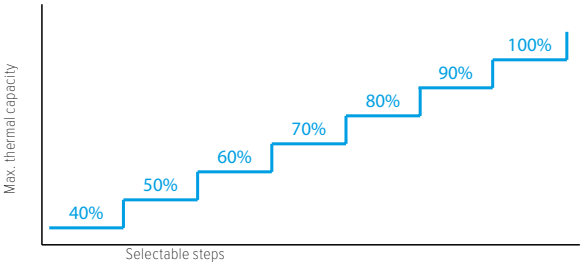
Floating refrigerant temperature for balancing comfort and efficiency

The evaporating temperature (in cooling) and condensing temperature (in heating) are automatically adjusted according to both indoor and outdoor temperature to maximize the comfort and energy efficiency.



Capacity output limitation for shortage of electricity

With the integration of EMS, for projects with limited electricity supply, MV6 can be set to output 40-100% capacity.



MR. DOCTOR

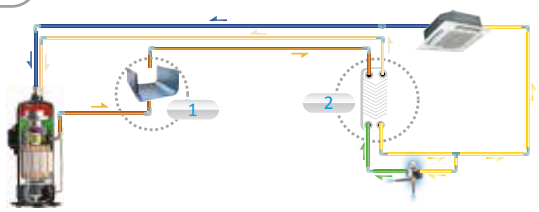
Force cooling /heating commissioning: force cooling or force heating operation can check the system comprehensively and quickly.

Self-diagnosys: all new diagnosis software to monitor all operating parameters and detailed information.

High Efficiency

PHE (PLATE HEAT EXCHANGER) SUBCOOLING

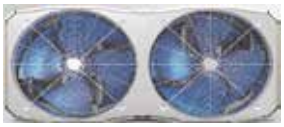
Plate Heat Exchanger as a secondary intercooler boosts up refrigerant subcooling and improves 10% energy efficiency.



HIGH EFFICIENCY G-TYPE HEAT EXCHANGER

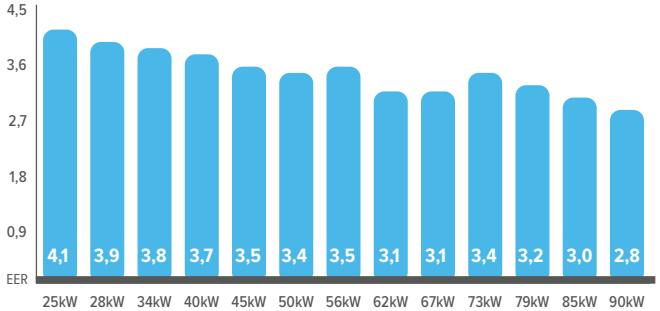
24-32HP units use high efficiency 3-rows G-type heat exchanger which heat exchange area is 1,5 times than 22HP unit. The 24-32HP units also use super big size fan which diameter is up to 750mm.

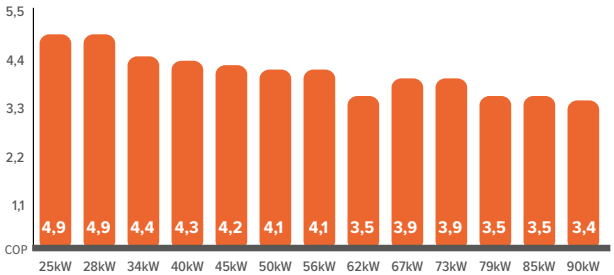
3-rows G-type heat exchanger



Super big size fan

HIGH EER AND COP VALUES





Wide Application Range

WIDE CAPACITY RANGE

VRF MV6i series has been designed for single module installation, with a capacity ranging from 8 HP to 32 HP.

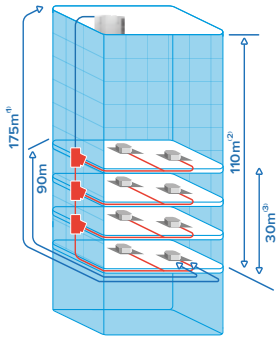
8/10/12 HP
(with single fan)

14/16/18 HP
(with single fan)

20/22 HP
(with dual fans)

24/26/28/30/32 HP
(with dual fans)

LONG PIPING CAPABILITY



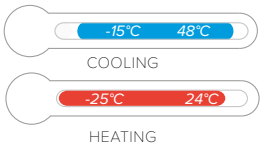
Piping length	Capability
Total piping length	1 000 m
Longest length - actual (equivalent)	175 m (200 m)
Longest length after first branch	90 m*
Largest height difference between indoor and outdoor units - ODU up (down)	90 m (110 m)
Largest height difference between indoor units	30 m

* The longest length after first branch is 40m as standard but can be extended to up to 90m under certain conditions. Please refer to technical manual for further information.

(1) Longest actual piping length
(2) Level difference between indoor units and outdoor units
(3) Level difference between indoor units

WIDE OPERATION RANGE

VRF MV6i can operate in a wide ambient temperature range.
It can operate stably from -15°C up to 48°C in cooling mode and from -25°C to 24°C in heating mode.

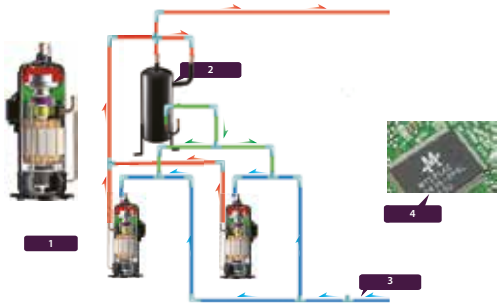


High Reliability

PRECISE OIL CONTROL TECHNOLOGY

Four stages of oil control technology ensure all outdoor compressor oil is always kept at a safe level, eliminating any compressor oil shortage problems.

(1) Compressor internal oil separation.
(2) High-efficiency centrifugal oil separator (with separation efficiency of up to 99%) ensures that oil is separated from the discharge gas and returned to the compressors in a timely fashion.
(3) Oil balance pipes between compressors ensure even oil distribution to keep compressors running normally.
(4) Auto oil return program monitors the running time and system status to ensure reliable oil return.



BACKUP OPERATION

Compressor backup

In one unit with two compressors, if one compressor is failed, the other compressor can be backup instead of the failed one to maintain up to 4 days interim capacity, allowing time for maintenance or repair while comfort remains guaranteed.

ANTI-CORROSION PROTECTION

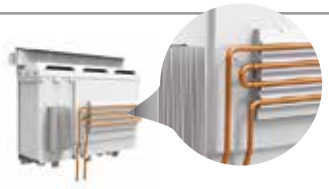
Outdoor units are given anti-corrosion treatment for non-extreme conditions as standard and can also be customized with heavy anti-corrosion treatment on main components for surface protection against corrosive air, acid rain and saline air (for installations in coastal regions) to extend overall useful life. The integrity of the anti-corrosion treatment is ensured by subjecting major components and parts to salt mist testing, moisture and heating testing and light aging testing.

Please contact your local dealer for further information about customization price and availability.

- Fan motor
- Painted sheet metal
- Screws / Bolts / Gaskets
- Heat exchanger aluminum foil
- Heat exchanger copper pipe
- Electric Control Box Case

REFRIGERANT COOLING PCB

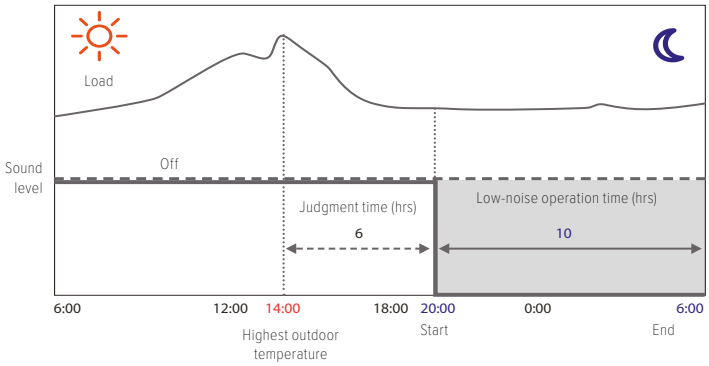
The MV6i series uses refrigerant cooling technology to cool the electric control box. It decreases the average temperature of electrical control components by about 8 degrees, guaranteeing the stable and safe running of the control system.



Enhanced Comfort

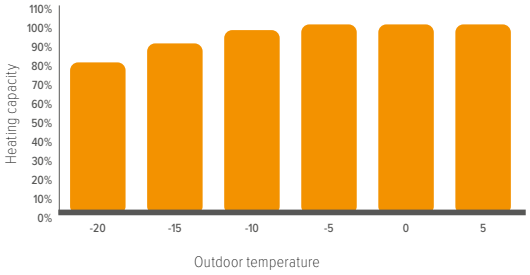
NIGHT MODE

The night silent mode feature includes various scheduling options that can be used to reduce noise levels when low noise operation is required: only during night hours or continuously, and with different noise reductions levels limiting only maximum fan speed or compressor speed also.



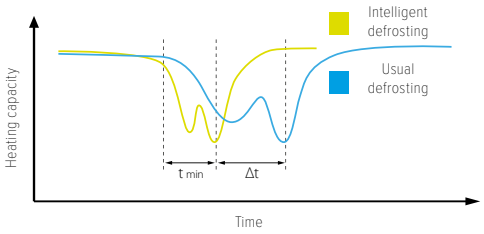
ENHANCED HEATING CAPACITY

Thanks to the vapour injection DC Inverter compressors, heating capacity can achieve 100% output when the ambient temperature is down to -5°C and 90% output when ambient temperature is down to -15°C.



INTELLIGENT DEFROSTING TECHNOLOGY

The intelligent defrosting program calculates the time required for defrosting according to the actual system status, eliminating heat losses from unnecessary defrosting. A specialized defrosting valve reduces time required for defrosting to as little at four minutes.



MULTIPLE PRIORITY MODE SETTINGS AVAILABLE

Operating mode priority can be set among different modes (automatic, cooling priority, VIP indoor unit, heating only, cooling only) to satisfy every specific user's need. Setting can be performed on outdoor unit directly or by centralized controller.

SMART INPUT/OUTPUT CONTACTS

Convenient connectors are available as standard on unit PCB, to realize some convenient operations on field with other building appliances depending on users' needs. Available contacts are heating/cooling switch as input and alarm as output.

Easy Installation and Service

AUTO ADDRESSING

Outdoor unit can distribute addresses to indoor units automatically.
Remote and wired controllers can be used to query or modify each indoor unit's address.

VRF MV6R

MV6R-XMi 252T÷1500T

DC INVERTER | HR | AIR | R-410A | CONTROL SYSTEM SPLIT VRF

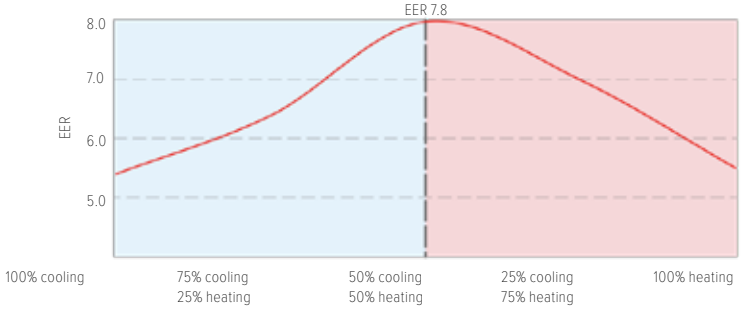
EUROVENT CERTIFIED PERFORMANCE

Heat recovery outdoor units

High efficiency

HEAT RECOVERY TECHNOLOGY

MV6R heat recovery outdoor units can perform both cooling and heating operation simultaneously and independently within the same system, ensuring the maximum operating flexibility for the users. Heat recovery is achieved by diverting exhaust heat from indoor units in cooling mode to areas requiring heating, minimizing the heat exchange with outside environment. As a result, power input and electricity costs are minimized, ensuring the best energy efficiency. In addition, inverter technology allows to adapt precisely to variable capacity loads.

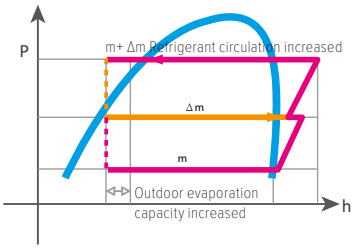


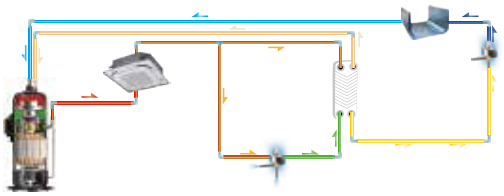
EER in simultaneous cooling and heating mode are based on the following condition:
Outdoor temperature 7°C DB/6°C WB, indoor temperature 27°C DB/19°C WB for cooling, indoor temperature 20°C DB for heating.

EVI (ENHANCED VAPOR INJECTION) COMPRESSOR

Thanks to the vapor injection DC inverter compressor, the MV6R series can run heating mode stably down to -25°C, furthermore strongly increasing the heating capacity especially at low ambient temperature. Compressor is designed to run at 7% modulation minimum, highly improving system efficiency at part load operation.

Vapor injection DC inverter compressor

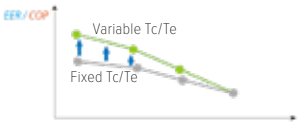




EMS (ENERGY MANAGEMENT SYSTEM)

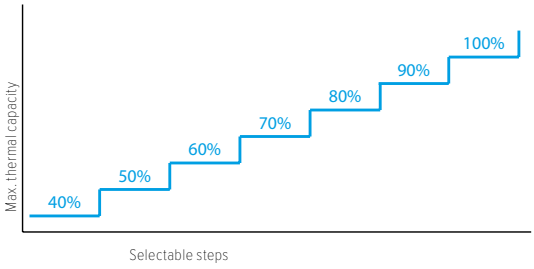
Floating refrigerant temperature for balancing comfort and efficiency

The evaporating temperature (in cooling) and condensing temperature (in heating) are automatically adjusted according to both indoor and outdoor temperature to maximize the comfort and energy efficiency, increasing the seasonal efficiency by 30%.



Capacity output limitation for shortage of electricity

With the integration of EMS, for projects with limited electricity supply, MV6R can be set to output 40-100% capacity.



MR. DOCTOR

Force cooling /heating commissioning: force cooling or force heating operation can check the system comprehensively and quickly.

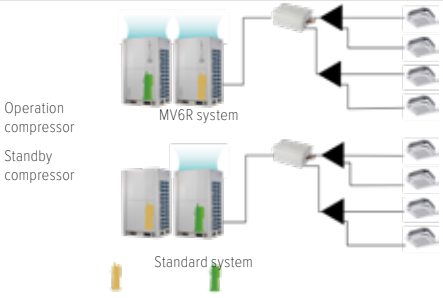
Self-diagnosys: all new diagnosis software to monitor all operating parameters and detailed information.

Automatic data backup: automatic data backup of last 30 minute's operation record.

Auxiliary PCB for quick access: placed on side column of the unit, it provides easy access to LED display and main settings without removing the front panel.

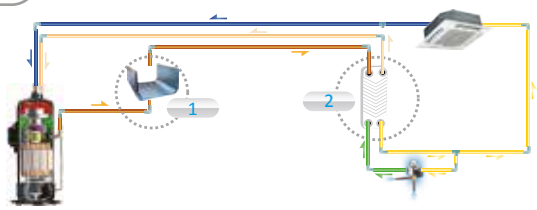
INDEPENDENT CONTROL OF HEAT EXCHANGERS AND COMPRESSORS

Both in cooling and heating mode, the outdoor heat exchanger and compressor are independently controlled to improve performances. So, in a multiple-unit system, when the compressor of an outdoor unit does not operate due to a lower thermal load, its heat exchanger is kept active to maximize heat exchange surface and efficiency.

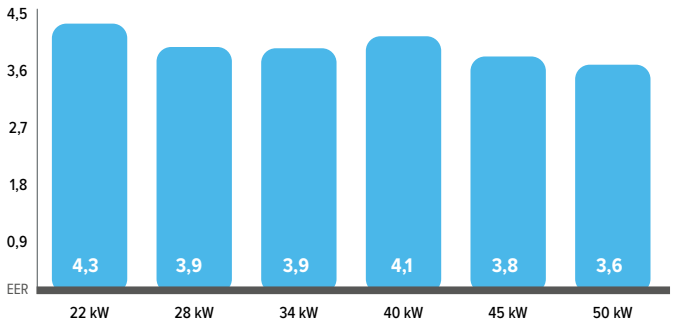


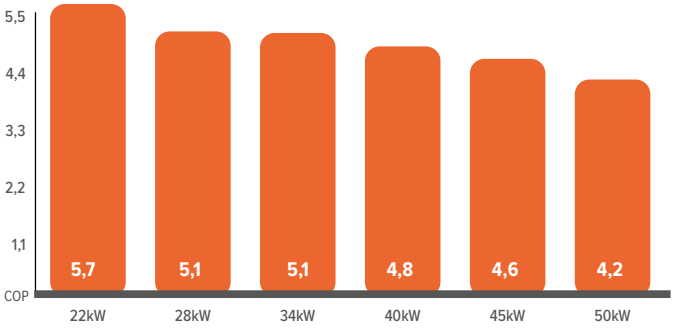
PHE (PLATE HEAT EXCHANGER) SUBCOOLING

Plate Heat Exchanger as a secondary intercooler boosts up refrigerant subcooling and improves 10% energy efficiency.



HIGH EER AND COP VALUES





Wide Application range

WIDE CAPACITY RANGE

VRF MV6R series capacity is up to 18HP with a single unit and up to a maximum of 54HP for a single system with a combination of 3 modules, covering all possible applications and building dimensions.

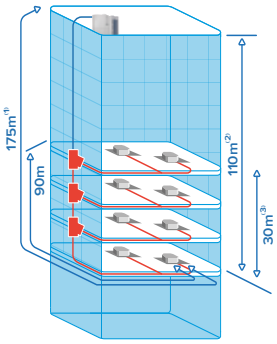
8/10/12 HP
(with single fan)

14/16/18 HP
(with dual fan)

20-36 HP

38-54 HP

LONG PIPING CAPABILITY



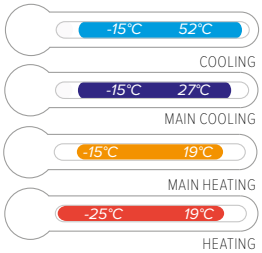
Piping length	Capability
Total piping length	1 000 m
Longest length between outdoor and indoor units - actual (equivalent)	175 m (200 m)
Longest length after first branch	90 m*
Longest length between MS box and IDU	40 m
Largest height difference between outdoor and indoor units - ODU above (below)	110 m (110 m)
Largest height difference between indoor units	30 m

*The longest length after first branch is 40m as standard but can be extended to up to 90m under certain conditions. Please refer to technical manual for further information.

(1) Longest length between outdoor and indoor units
(2) Level difference between indoor units and outdoor units
(3) Level difference between indoor units

WIDE OPERATION RANGE

VRF MV6R can operate in a wide ambient temperature range.
It can operate stably from -15°C up to 52°C in cooling mode and from -25°C to 19°C in heating mode.
Simultaneous heating and cooling operation is guaranteed from -15°C to 27°C in main cooling and from -15°C to 19°C in main heating.*



*Cooling mode down to -15°C available in combination with single MS box MS01.
Wet-bulb temperatures in cooling mode, dry-bulb in heating mode.

High Reliability

DUTY CYCLING

Duty cycling equalizes the running time of the outdoor units in a multiple-unit system and of the compressors in each unit, significantly extending compressor lifespan.

1st cycle

2nd cycle

3rd cycle

PRECISE OIL CONTROL TECHNOLOGY

Three stages of oil control technology ensure all outdoor compressor oil is always kept at a safe level, eliminating any compressor oil shortage problems.

(1) Compressor internal oil separation.

(2) High-efficiency centrifugal oil separator (with separation efficiency of up to 99%) ensures that oil is separated from the discharge gas and returned to the compressors in a timely fashion.

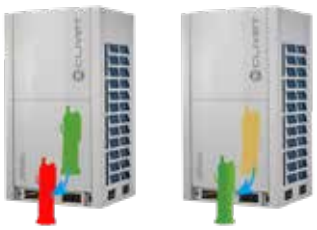
(3) Auto oil return program monitors the running time and system status to ensure reliable oil return.

Compressor internal oil separation

High-efficiency centrifugal oil separator

Auto oil return program

BACKUP OPERATION



Compressor backup

In a multiple-unit system, if one module fails, the other modules provide backup so that the system can continue operating, maintaining up to 4 days interim capacity and allowing time for maintenance or repair while comfort remains guaranteed.

ANTI-CORROSION PROTECTION

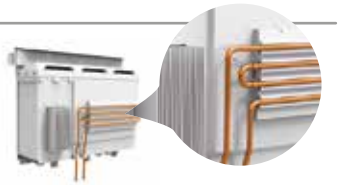
Outdoor units are given anti-corrosion treatment for non-extreme conditions as standard and can also be customized with heavy anticorrosion treatment on main components for surface protection against corrosive air, acid rain and saline air (for installations in coastal regions) to extend overall useful life. The integrity of the anti-corrosion treatment is ensured by subjecting major components and parts to salt mist testing, moisture and heating testing and light aging testing.

Please contact your local dealer for further information about customization price and availability.

- Fan motor
- Painted sheet metal
- Screws / Bolts / Gaskets
- Heat exchanger aluminum foil
- Heat exchanger copper pipe
- Electric Control Box Case

REFRIGERANT COOLING PCB

The MV6R series uses refrigerant cooling technology to cool the electric control box. It decreases the average temperature of electrical control components by about 8 degrees, guaranteeing the stable and safe running of the control system.



AUTO SNOW-BLOWING FUNCTION

The innovatively designed auto snow-blowing function enables the outdoor unit to prevent the accumulation of snow by itself.

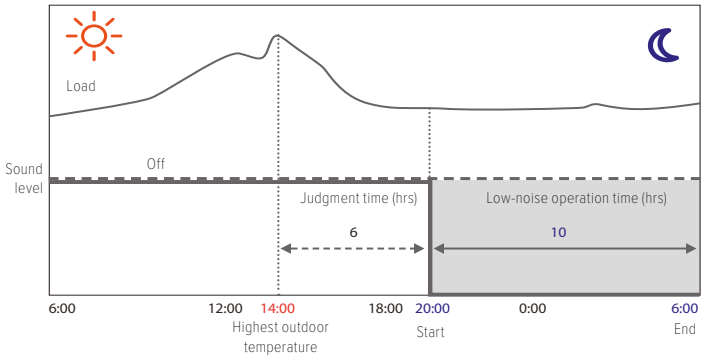
DUST-CLEAN FUNCTION

The innovatively designed dust-clean function enables the outdoor unit to prevent the dust by itself.

Enhanced Comfort

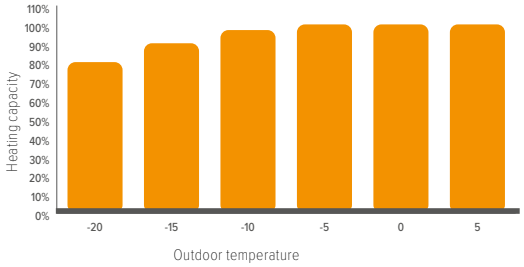
NIGHT SILENT MODE

The night silent mode feature includes various scheduling options that can be used to reduce noise levels when low noise operation is required: only during night hours or continuously, and with different noise reductions levels limiting only maximum fan speed or compressor speed also.



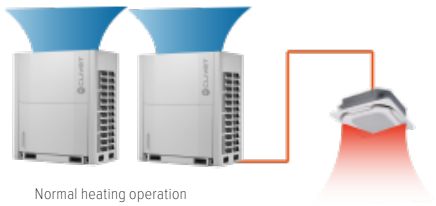
ENHANCED HEATING CAPACITY

Thanks to the vapour injection DC Inverter compressor, heating capacity can achieve 100% output when the ambient temperature is down to -5°C and 90% output when ambient temperature is down to -15°C.

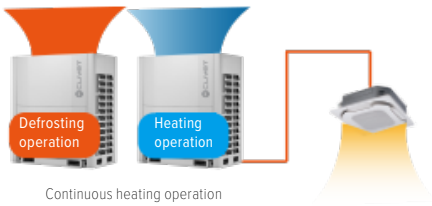


CONTINUOUS HEATING DURING DEFROST

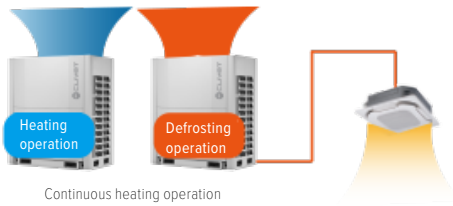
As an alternative to the traditional defrost technology performed reverting the refrigerant cycle, in a multiple-units MV6R system it is possible to keep heating by defrosting alternatively and independently the heat exchangers of different units. Thus, it is possible to supply continuously heating without stopping for defrost operations.



Normal heating operation



Continuous heating operation



Continuous heating operation

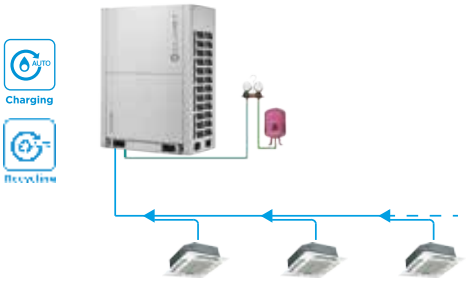
Easy Installation and Service

AUTO ADDRESSING

Outdoor unit can distribute addresses to indoor units automatically.
Remote and wired controllers can be used to query or modify each indoor unit's address.

AUTOMATIC REFRIGERANT CHARGING AND RECYCLING FUNCTION

Automatic refrigerant charging function make the installation and service easier and more efficient, automatically collecting refrigerant from the tank and stopping the operation when exact refrigerant charge is done. Automatic refrigerant recycling allows to recover and accumulate the refrigerant inside the outdoor unit or on indoor units side automatically when required before repairing, strongly simplifying the technical intervention.

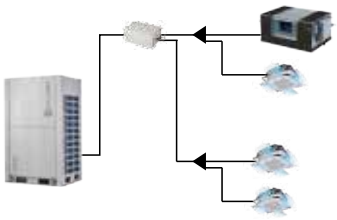


Suitable for any application

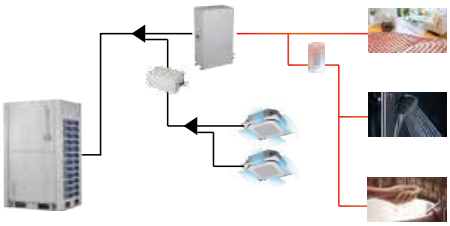
MAXIMUM APPLICATION FLEXIBILITY

In addition to simultaneously heating and cooling different spaces via different indoor units belonging to the same system, MV6R series can manage fresh air processing units (A), beside high temperature hydronic modules to supply hot water up to 80°C (B), or air handling units through specific kits (C). According to the different combinations of units connected, the system can manage up to 200% of outdoor units' capacity.*

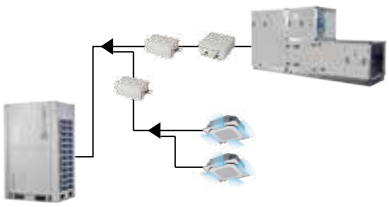
A



B



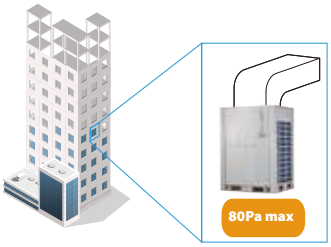
C



*Please refer to technical manual for further information about total capacity index as function of specific units connected.

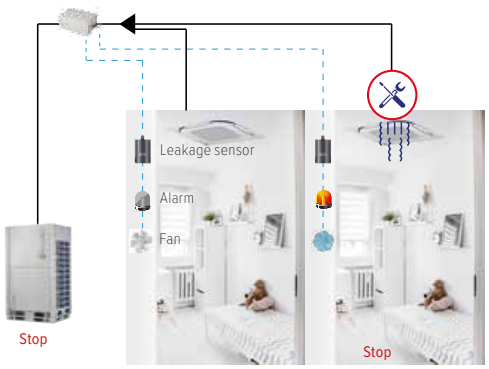
FAN ESP UP TO 80 PA

Fan motor can be set to provide an external static pressure up to 80 Pa, facilitating the installation of the unit in technical rooms or in areas where the proper airflow cannot be ensured, by installing ducts and directing the air towards the outside.



REFRIGERANT LEAK DETECTION FUNCTION

Refrigerant leakage detectors can be managed through specific input/output contacts to automatically stop the system operation and to display the malfunction on remote controllers or via possible luminous signal and activating also specific exhaust fans if needed.*



*Function available in combination with single MS box MS01. Refrigerant leakage detectors and possible alarm lights or exhaust fans to be supplied by 3rd party

MS box for VRF MV6R

Heat recovery and simultaneous heating and cooling within the same system are possible thanks to specific MS box located between outdoor units and indoor units, which separate gas-phase and liquid-phase refrigerant diverting it towards different spaces requiring heating or cooling.
MS box are available in various versions, with single branch or multiple branches.

SINGLE MS BOX

- Cooling mode operation extended down to -15 °C
- 3rd party refrigerant leakage sensors management and possible leakage insulation through specific shut-off valve
- Up to 8 indoor units connectable with a total capacity up to 32 kW (running in the same operating mode)
- Compact and light to install
- No drain piping needed
- Extreme control precision through a 3200 step electric ball valve
- Silent operation

MS01N1-D

MULTIPLE MS BOX

- 4, 6, 8, 10 and 12 branches versions available
- Up to 5 indoor units connectable for each branch (running in the same operating mode), for a total of 47 indoor units maximum per MS box for the 12 branches version
- Up to 16 kW for each branch, or 28 kW by connecting 2 branches

MS04N1-D

MS06N1-D

Sound pressure level (3)			dB(A)	40	44	45	47	47	47
Sound power level (3)			dB(A)	60	63	65	65	65	65
Power supply			V/Ph/Hz	220-240/1/50					

(1) All indoor units connected to the same branch of MS box should operate the same mode.

(2) For 4 to 12 branches MS box models, 16 kW to 28 kW capacity indoor units can be connected by merging two branches to one through FQZHN-09A connection kit.

(3) Sound values are measured in a semi-anechoic room, at a position 1m below the MS box in mode switch condition.

It is recommended to avoid the installation of MS box in locations with low-noise requirements.

VRF MW

MW-XMi 252T÷1005T

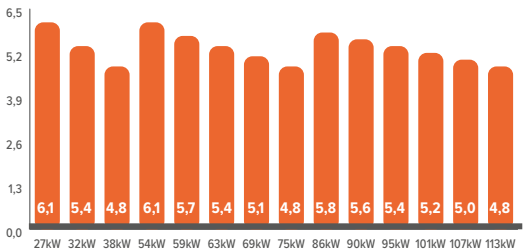
DC INVERTER | H2O | R-410A | CONTROL SYSTEM SPLIT VRF

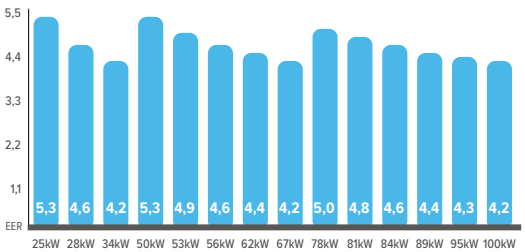
Water-source heat pump

High efficiency

HIGH ENERGY SAVING

Designed for indoor installation, MW Series combines water system and refrigerant system perfectly. COP and EER are up to 6,07 and 5,25 respectively. Compared with air-cooled VRF, energy saving is higher. In addition, thanks to water constant temperature throughout the year, energy efficiency is kept always high.





HIGH EFFICIENCY DOUBLE-PIPE HEAT EXCHANGER

With the innovatively designed double-pipe heat exchanger, the water quality required is low. The water side has large circulation area to avoid clogs, ensuring higher reliability and easier maintenance.

WATER SIDE HEAT RECOVERY POSSIBILITY

In modern large-scale buildings, the load between the internal and external areas can be different. It may occur in some situations that both cooling and heating are required. The MW Series not only can achieve meticulous system division in different areas but also can recover heat on water side, significantly improving energy efficiency.

AUTO ADDRESSING

Outdoor unit can distribute addresses to indoor units automatically. Remote and wired controllers can be used to query or modify each indoor unit's address.

Wide Application Range

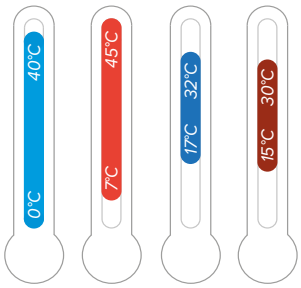
WIDE RANGE OF OUTDOOR UNITS

The Water Cooled MW Series capacity ranges from 8HP to 36HP, meeting all customer requirements from small to large buildings.

8/10/12 HP

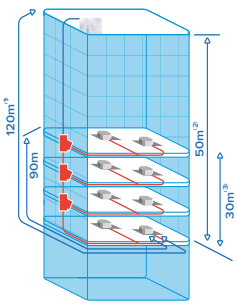
Max 3 units combination

WIDE OPERATION TEMPERATURE RANGE



- Main unit ambient temperature: 0°C~40°C
- Main unit water inlet temperature: 7°C~45°C
- Indoor temperature in cooling mode: 17°C~32°C
- Indoor temperature in heating mode: 15°C~30°C

LONG PIPING LENGTH



Piping length	Capability
Total piping length	300 m
Longest length - actual (equivalent)	120 m (150 m)
Longest length after first branch	90 m*
Largest height difference between indoor and outdoor units - ODU up (down)	50 m (40 m)
Largest height difference between indoor units	30 m

* The longest length after first branch is 40m as standard but can be extended to up to 90m under certain conditions. Please refer to technical manual for further information.

(1) Longest actual piping length
(2) Level difference between indoor units and outdoor units
(3) Level difference between indoor units

DC INDOOR UNITS

New generation indoor units for VRF systems

Wide application range

WIDE RANGE OF INDOOR UNITS

With 14 types and more than 100 models, Clivet VRF indoor units meet varied customer requirements in a wide range of locations including shopping malls, hospitals, office buildings, hotels and airports.

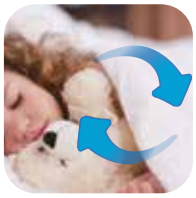
Comfort and Efficiency

HIGH EFFICIENCY DC FAN MOTOR

The power consumption of DC fan motor can be reduced greatly in comparison to corresponding AC type.

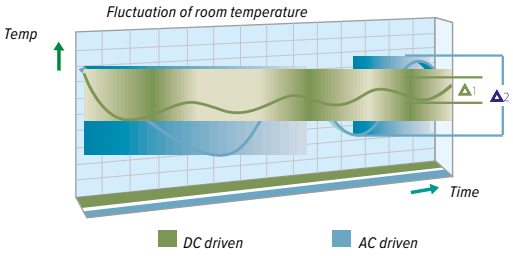
QUIET OPERATION

The low sound operation DC fan motor and optimized fan blades guarantee a smooth air discharge and provide a quiet living environment.



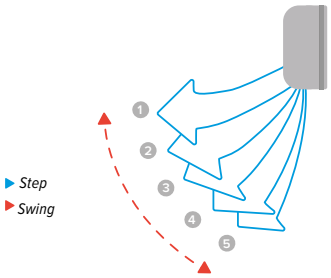
CONSTANT LEVEL OF INDOOR AIR TEMPERATURE

The DC Inverter fan motor adjusts of air flow based on thermal load instantly providing less temperature fluctuation and an improved living environment.



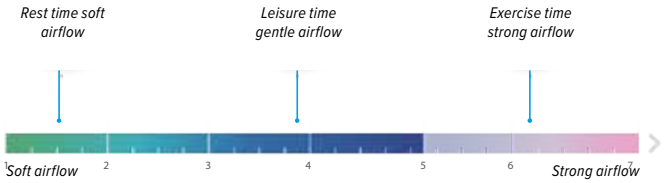
5-STEP SWING LOUVER

The air is comfortably spread upwards and downwards thanks to the 5-step swing louver that can be programmed via the controller.



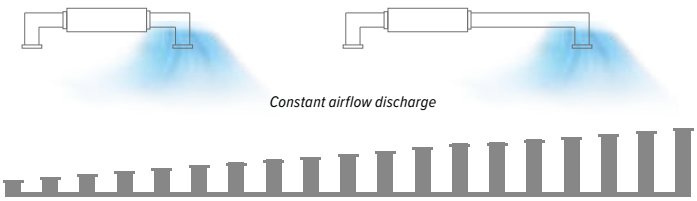
7-SPEED FAN CONTROL

7 fan speeds of the indoor units provide control flexibility to meet the needs of different indoor conditions.



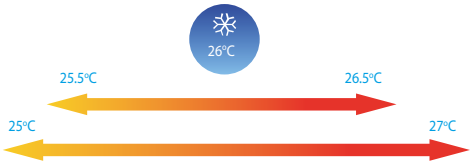
STATIC PRESSURE 20 STEPS CONTROL (DUCT UNIT)

Depending on the installation environment, medium static pressure duct can be precisely set among 10 different steps of static pressure/airflow rate combinations, and up to 20 steps for high static pressure duct via wired remote controller, providing comfortable environment suitable for any application.



0,5 °C TEMPERATURE SETTING

Target temperature can be adjusted in 0.5°C or 1°C steps, increasing environmental comfort in combination with new generation controls.



SMART INPUT/OUTPUT CONTACTS

Convenient connectors are available as standard in all indoor units, to realize some convenient operations on field with other building appliances depending on users' needs.
Available contacts are on/off as input to indoor units and alarm as output.

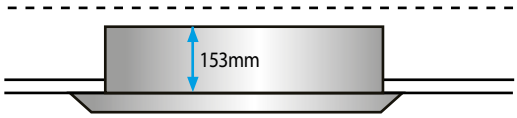
1-WAY CASSETTE

Q1DN-2-XMi D18÷D71

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

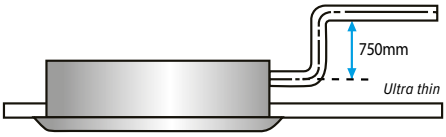
ONLY 153 MM HIGH

The slim, compact design make the One-way Cassette ideal for interiors with limited ceiling space. Models 18 to 36 are just 153 mm high whilst models 45 to 71 are 189 mm high.



HIGH-LIFT DRAIN PUMP

A drain pump with a 750 mm pump head is fitted as standard.



FRESH AIR INTAKE

A reserved outside air intake port allows outdoor air to be introduced directly into the unit for sizes from D45 to D71, negating the need for a separate ventilation system.

2-WAY CASSETTE

Q2DN-2-XMi D22÷D71

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

LOW SOUND LEVEL

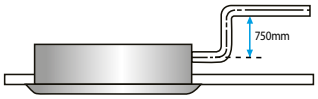
The Two-way Cassette's optimized, low resistance air outlets reduce noise levels to as low as 24 dB(A).

HIGH AIRFLOW

A high airflow rate ensures even airflow and temperature throughout the room, even in high ceiling installations.

HIGH-LIFT DRAIN PUMP

A drain pump with a 750 mm pump head is fitted as standard.



FRESH AIR INTAKE

A reserved outside air intake port allows outdoor air to be introduced directly into the unit, negating the need for a separate ventilation system.

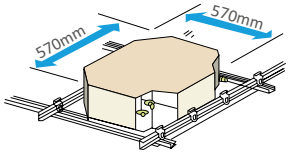
COMPACT 4-WAY CASSETTE

Q4AN-2-XMi D17÷D52

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

COMPACT DESIGN, EASY INSTALLATION

Extremely compact casing suits any room's decor and requires little space for installation on a low ceiling.
Due to the compact body and light weight, all models can be installed without a hoist.

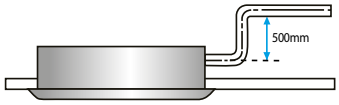


PANEL DESIGN

The panel design provide strong airflow circulation to cool or heat every corner of a room and evenly control temperature.

HIGH-LIFT DRAIN PUMP

A drain pump with a 500 mm pump head is fitted as standard.



FRESH AIR INTAKE

A reserved outside air intake port allows outdoor air to be introduced directly into the unit, negating the need for a separate ventilation system.

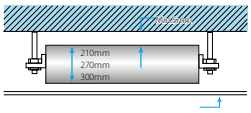
MEDIUM STATIC PRESSURE DUCT

CNT2-2-XMi D17÷D140

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

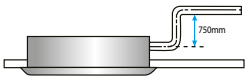
COMPACT DESIGN

Models 22 to 71 are just 210 mm high whilst models 80 to 112 are 270 mm high and model 140 is 300 mm high, all easily positioned in the false ceiling.



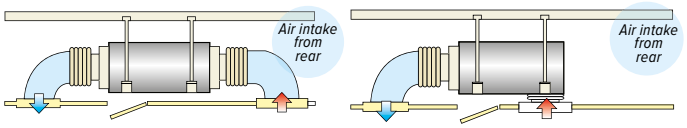
HIGH-LIFT DRAIN PUMP

A drain pump with a 750 mm pump head is fitted as standard, simplifying installation of the drain piping.



FLEXIBILITY

To provide the flexibility to adapt to differing installation situations, the air inlet may be positioned either on the underside or the rear of the unit.



STATIC PRESSURE 10 STEPS CONTROL

Depending on the installation environment, units can be precisely set among 10 different steps of static pressure/ airflow rate combinations, providing comfortable environment suitable for any application.

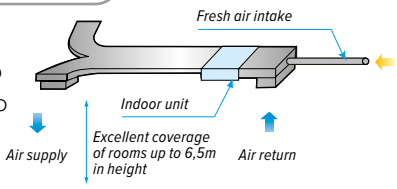
HIGH STATIC PRESSURE DUCT

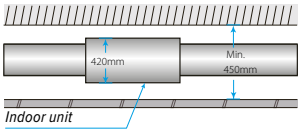
CN-2-XMi D71÷D560

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

FLEXIBLE DUCT DESIGN

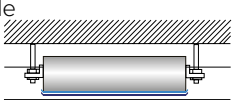
The High Static Pressure Duct indoor unit offers external static pressures of up to 400 Pa allowing air supply duct lengths of up to 14 m at a height of 6,5 m. With a height of just 420 mm (units D71 to D160), only 450 mm of ceiling space is required.





DOUBLE-SKIN DRAINAGE PAN

A double-skin drainage pan provides double protection for ceilings (units D71 to D160).



EASY INSTALLATION

Flanges for air inlet/outlet ducts are fitted as standard on the High Static Pressure Duct. On units D71 to D160, the expansion valve is fitted inside the unit, requiring no extra connection.

STATIC PRESSURE WITH 20 STEPS CONTROL

Depending on the installation environment, units can be precisely set up to 20 steps of static pressure/airflow rate combinations via wired remote controller, providing comfortable environment suitable for any application.

20 steps static pressure control

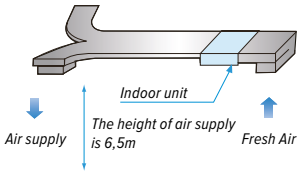
FRESH AIR PROCESSING UNIT

CNFA-2-XMi D125÷D140

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

100% FRESH AIR PROCESSING UNIT

Both fresh air filtration and heating/cooling can be achieved in a single system. Indoor units and the Fresh Air Processing Unit can be connected to the same refrigerant system, increasing design flexibility and greatly reducing total system costs.



FLEXIBLE DUCT DESIGN

The Fresh Air Processing unit offers external static pressures of up to 200Pa, allowing air supply duct lengths of up to 14 m at a height of 6,5 m.

THE COMFORT OF FRESH AIR

Enjoy the comfort and health benefits of fresh air being drawn into your working or living environment.

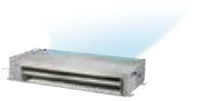
STATIC PRESSURE WITH 20 STEPS CONTROL

Depending on the installation environment, units can be precisely set up to 20 steps of static pressure/airflow rate combinations via wired remote controller, providing comfortable environment suitable for any application.

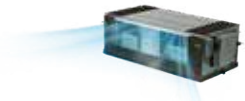
20 steps static pressure control

SUPPLY AIR TEMPERATURE CONTROL

While other VRF indoor units control the return air temperature as set point, the fresh air processing unit controls the supply air temperature as set point, in order to more precisely manage the outdoor fresh air and release it indoor.



Return air temperature control



Supply air temperature control

Data measured at standard external static pressure.

(1) Outdoor temperature 33°C DB/28°C WB. Piping length: Interconnecting piping length is 7,5 m, level difference is zero.

(2) Outdoor temperature 0°C DB/-2,9°C WB. Piping length: Interconnecting piping length is 7,5 m, level difference is zero.

(3) Data refer to the 7 fan speeds, in descending order.

(4) Sound values are measured in a semi-anechoic room, at a position 1,4 m below the unit.

(5) Unit body dimensions given are the largest external dimensions of the unit, including hanger attachments

The Fresh Air Processing Unit can be used either independently or in conjunction with other types of indoor unit. If used independently, the total capacity of the Fresh Air Processing Units must be between 50% and 100% of that of the outdoor units. If used in conjunction with other types of indoor unit, the total capacity of the Fresh Air Processing Units must not exceed 30% of that of the outdoor units and the total capacity of indoor units + Fresh Air Processing Units must be between 50% and 100% of that of the outdoor units .

WALL-MOUNTED

GWMN-2-XMi D17÷D90

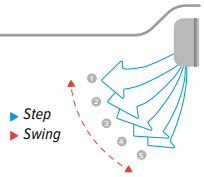
DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

MODERN DESIGN

The elegant appearance enhance the aesthetics of any room and are suitable for a wide variety of installation space situations.

AUTO SWING LOUVER

Multiple louver positions and the auto swing ensure precise and flexible airflow control.

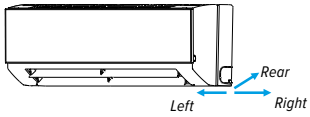


HIGH EFFICIENCY, LOW SOUND LEVEL

Advanced brushless DC fan motor operates highly efficiently without generating excessive noise, saving energy at the same time as providing a low-noise work or living space.

FLEXIBILITY

To increase installation flexibility, the expansion valve is fitted internally, increasing compactness, and the refrigerant outlet direction can be left, right or rear as the installation situation requires. A new fixing plate design speeds installation and provides extra stability.



OPTIMAL COMFORT THROUGH BETTER FLOW CONTROL

A 2000-stage element mechanical expansion valve ensures precise flow control whilst generating little modulation noise. A multi-blade fan coupled with a dual-blade air guide smooth output airflow and three fan speeds provide flexibility to respond to users' particular comfort requirements.

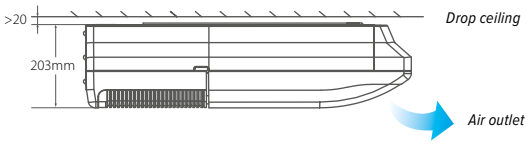
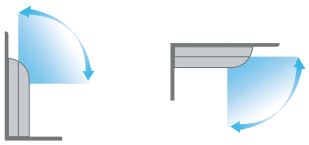
CEILING & FLOOR

DDLC-2-XMi D36÷D140

FLEXIBILITY

A sleek design suits installation either on the ceiling or floor, providing flexibility to accommodate a wide range of room designs.





The unit can be installed either horizontally on the ceiling or vertically against the wall.

WIDE-ANGLE SWING

A wide-angle swing together with bi-directional louver swing allows the positioning of the unit to be selected to suit the room's decor, whilst ensuring that full-room cooling and heating coverage is achieved.

INCREASED COMFORT

Sound levels as low as 36dB(A) are achieved using electronic expansion valves which ensure precise flow control whilst generating little modulation noise. A multi-blade fan coupled with a dual-louver air guide smooth output airflow.

FLOOR STANDING

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

FLEXIBILITY

The Floor Standing indoor unit can be installed on the floor or, for easier floor cleaning, hung on the wall with piping running from the rear. The streamlined appearance complements any room's decor.

CASING OPTIONS

At just 212 mm deep, the DZGF3B-XMi concealed floor standing unit can be installed around the perimeter of a room, hidden behind the skirting board, and special installation methods can be used to eliminate noise from the room space. The DZDF4-XMi (front air intake) and DZDF5-XMi (underside air intake) offer a choice of air intake options.

HIGH TEMPERATURE HYDRO MODULE

HWM-2-XMi 140

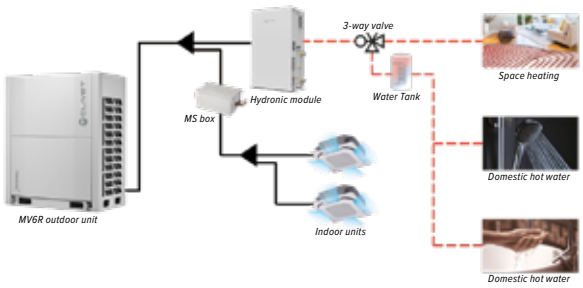
DC INVERTER

R-134a R-410A CONTROL SYSTEM SPLIT VRF

NEW

INTEGRATED HOT WATER PRODUCTION UP TO 80 °C

Specifically developed in combination with MV6R heat recovery series, High Temperature Hydro Module unit can produce hot water up to 80 °C to meet all possible demands: from space heating through underfloor heating, fan coils or radiators, to domestic hot water production.
Heat recovery series connection ensures all year round operation and to optimize system efficiency especially during summer season, allowing the simultaneous operation of the hydronic module producing domestic hot water and of indoor units cooling the rooms.

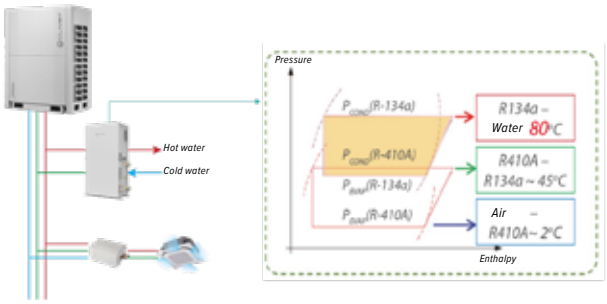


INDOOR UNITS

R134A CASCADE CIRCUIIT

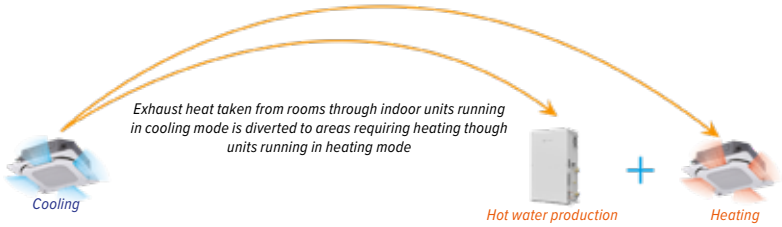
In order to raise water temperature supplied up to 80 °C, an independent R134a refrigerant circuit included in the unit is used:

- Within the main R410A refrigerant circuit common to the whole VRF system, the heat is taken from the ambient and diverted to the hydronic module through a plate heat exchanger;
- Inside the hydronic module, the heat transferred from the main circuit to the R134a cascade cycle is furtherly raised and released to the hydraulic circuit through another plate heat exchanger.



"FREE" HOT WATER PRODUCTION

Thanks to the heat recovery technology of the MV6R series, during the summer season it is possible to use the exhaust heat taken from the rooms through the indoor units operating in cooling mode and divert it to the hydro module for hot water production. Thus, it is sufficient to use the compressor included in the hydronic module to raise the thermal level and produce hot water with minimum power input.



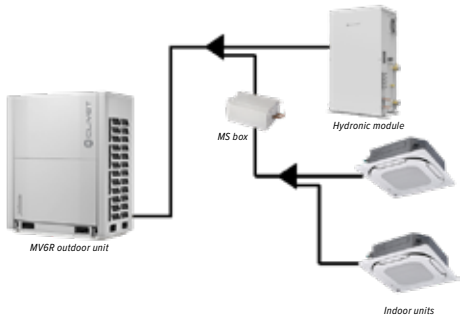
COMPACT AND LIGHT

The unit has been developed with a compact design to offer the minimum dimensions. The low weight furtherly simplifies transportation and installation.

EXTENDED CONNECTIVITY UP TO 200%

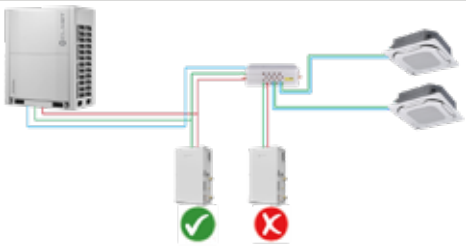
In a mixed system composed of hydronic modules and indoor units it is possible to connect up to 200% of outdoor unit capacity, in order to fully benefit from the simultaneousness of cooling and heating loads.

	MV6R system	Capacity index
Hydronic module + VRF indoor units	Total capacity index	50%~200%
	Total VRF indoor units capacity index	50%~130%
	Total hydronic modules capacity index	0%~100%



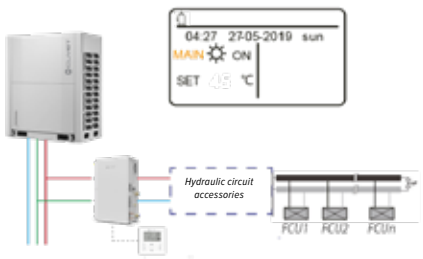
OPTIMIZED CONNECTION

Hydronic module is connected to the refrigerant circuit on the main pipe before the MS box, avoiding occupying ports and allowing the connection of more indoor units.

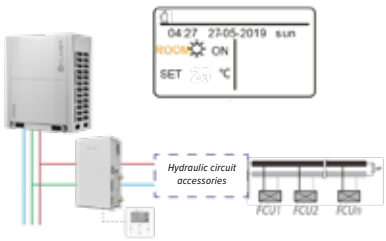


SUITABLE FOR MULTIPLE APPLICATIONS

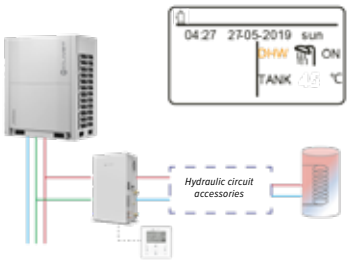
- **Scenario 1:** space heating application with supply water temperature control.



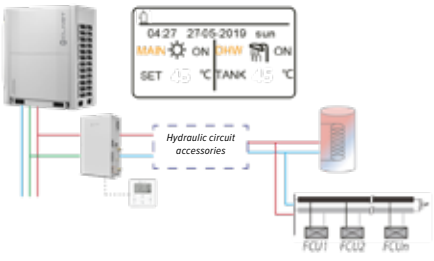
- **Scenario 2:** space heating application with room temperature control.



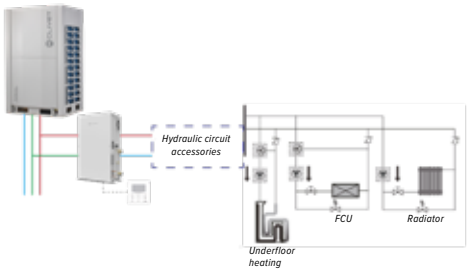
- **Scenario 3:** domestic hot water application with water tank temperature control.



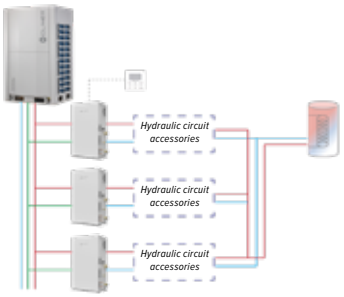
- **Scenario 4:** domestic hot water application and space heating simultaneously.



- **Scenario 5:** space heating application with multiple set point temperature for up to 3 zones management.



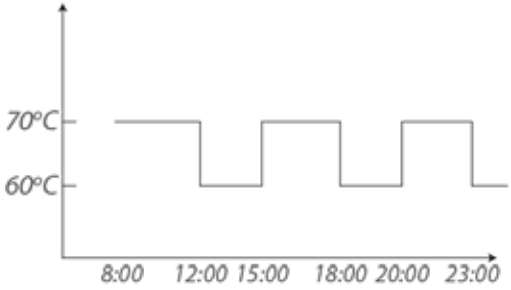
- **Scenario 6:** modular units configuration with group management and water tank temperature control.



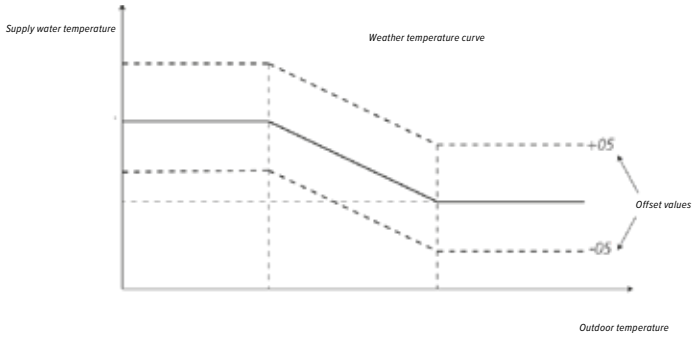
MULTIPLE ADVANCED FUNCTIONS

- **Weekly timer and variable temperature set point:** several settings (set point, operating mode) are available to be scheduled to automate operations according to user's specific needs.

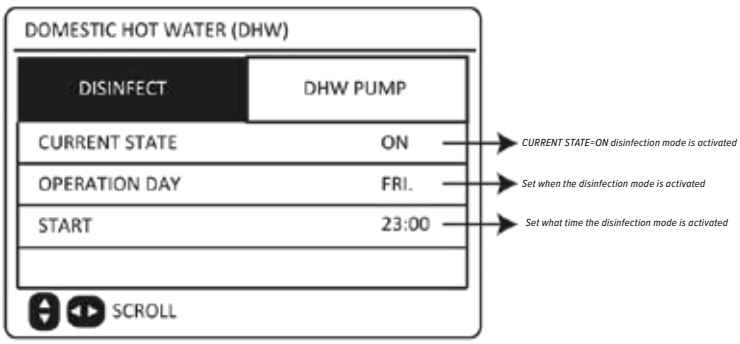
NO.	TIME	TEMP.
1	8:00	70 °C
2	12:00	60 °C
3	15:00	70 °C
4	18:00	60 °C
5	20:00	70 °C
6	23:00	60 °C



- **Weather temperature curve:** in space heating mode, supply water temperature is adjusted as function of the outdoor temperature, either when control is based on room temperature or on supply water temperature. Weather temperature curve can be modified according to user's preferences.

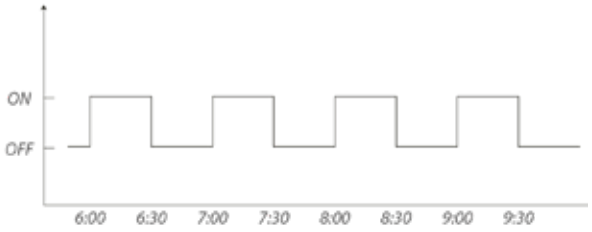


- **Disinfection mode:** in order to prevent the formation of legionella bacteria, a specific disinfection function has been designed, which can be scheduled to be performed regularly in specific days and hours.



- **DHW recirculating pump function:** in order to ensure the immediate supply of domestic hot water at any time, recirculating pump can be regularly activated in time periods settable by the wired controller.

NO.	TIME
1	6:00
2	7:00
3	8:00
4	9:00



- **Silent mode:** whereas silence is a crucial requirement, noise levels of the unit can be limited in specific time periods or continuously.
- **Holiday mode:** holiday mode prevents frost formation inside the water circuit, keeping also possible schedules if needed.
- **Settings Lock** (on/off operating mode, set point temperature, maximum power input) by wired controller.
- **Parameters monitor and alarms** on wired controller.

HEAT RECOVERY VENTILATOR

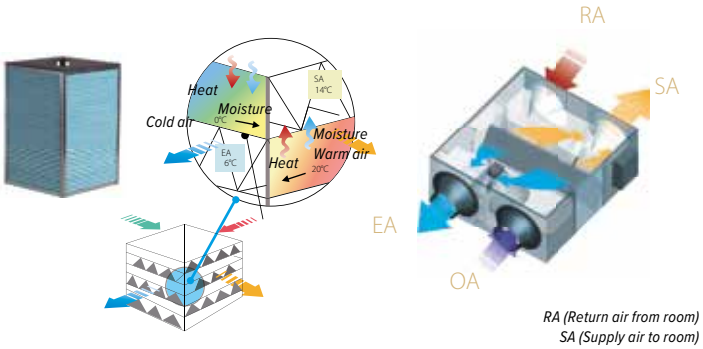
HRV-2-Mi D200÷D2000

DC INVERTER

CONTROL SYSTEM SPLIT VRF

ENHANCED EFFICIENCY

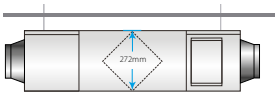
The heat recovery ventilator (HRV) can greatly reduce energy losses and room temperature fluctuations caused by the ventilation process. The HRV's strong performance is a result of the advanced technology incorporated into its design. The heat exchanger core is made of specially treated paper which gives enhanced temperature and humidity control. Exchange efficiencies are over 80%.



RA (Return air from room)
SA (Supply air to room)
EA (Exhaust air to outdoors)
OA (Fresh air from outdoors)

FLEXIBILITY

Heights starting from as little as 272 mm and weights from as little as 46 kg mean that the HRV can be easily installed even where space is limited.



LOW NOISE

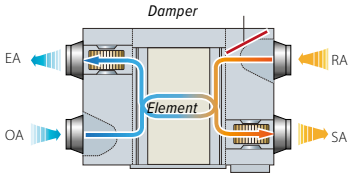
Soundproofing is used to guarantee quiet operation.

HRV and PRIMARY AIR

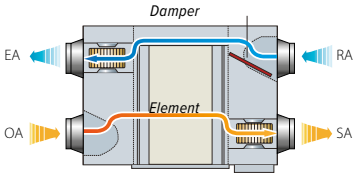
MULTIPLE MODES

Heat exchange mode
The flows of incoming and outgoing air pass close to each other, allowing heat transfer between the two channels. During summer, incoming air is cooled by the indoor air being exhausted and in winter, incoming air is warmed.

Bypass mode
In mild climates or seasons, where temperature and humidity differences between indoors and outdoors are small, the HRV can work as a conventional ventilation fan. In standard bypass mode the supply and exhaust fans run at the same speed.



Air supply mode
Air supply mode is a form of bypass mode where the supply fan is set to run faster than the exhaust fan, which is useful in mild climate installations with high fresh air ventilation requirements.



Exhaust mode
Exhaust mode is a form of bypass mode where the exhaust fan is set to run faster than the supply fan, which is useful in mild climate installations with large amounts of exhaust air to be expelled.

Auto mode
The controller chooses heat exchange mode or bypass mode according to the temperature difference between outdoors and indoors. Both fans are set to run at low speed.

ECO-DESIGN

The unit complies with regulation (EU) 1253/2014 requirements for ventilation units.

FLEXIBLE CONTROL

NEW

The HRV unit can be controlled by its own command, or together with other indoor units by a centralized control.

For HRV-2-Mi D200~HRV-2-Mi D2000, there are 3-speed adjustable air-volume (Hi, Med, Low).

All the parameters are measured at the high speed air-volume.

(1) Temperature Exchange Efficiency is the mean value between cooling and heating
Cooling: air exhaust temp 27°C DB, 19.5°C WB; fresh air temp. 35°C DB, 28°C WB.
Heating: air exhaust temp 21°C DB, 13°C WB; fresh air temp. 5°C DB, 2°C WB.

(2) Sound level is measured 1,4 m below the center of the unit in an anechoic chamber.

(3) DB temperatures with 80% RH or less

accessories

KJR-27B Wired controller

HRV-DX-2 HEAT RECOVERY VENTILATOR WITH DX COIL

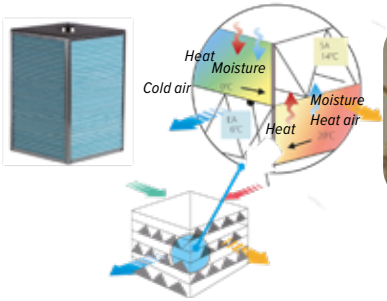
HRV-DX-2-XMI D500-D1000

DC INVERTER | 1 3 | R-410A | CONTROL SYSTEM SPLIT VRF

NEW

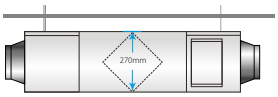
ENHANCED EFFICIENCY

Heat recovery ventilator with coil DX HRV-DX-2 combines technological advantages of enthalpic energy exchange between exhaust and supply air through a special core realized with pre-treated paper and of DX coil connected to VRF system to which is connected. Thus, the unit can both heat or cool and ventilate the rooms, improving both comfort and energy saving.



FLEXIBILITY

Due to a minimum height of 270 mm, the unit can be installed in limited false cellings. As components are cabled and included in the unit, installation is simple as for other VRF indoor units since it is sufficient to perform electric and refrigerant connections with the system.



HIGH FILTRATION GRADE AND AIR QUALITY

The healthiness of the air and the minimum fouling of the exchanger are guaranteed by filters G3 and F9 on the supply section and G3 on the exhaust section, in order to increase the air quality supplied to the environment. For maximum air quality, the Bioxigen® purification system is available as an accessory, which allows, through a controlled bipolar ionization process, multiple benefits such as an antibacterial effect and the removal of odors, pollutants, mold and pollen.

BYPASS FOR FREE COOLING

During summer, when external temperatures are lower than internal, air is diverted , excluding the recovery, directly to the ambient, reducing the requested load of the installation and enhancing energy efficiency.

3 FAN SPEEDS

The unit is equipped with DC fan with 3 speeds available optimizing the air flow rate according to the requests.

CONTROLLER INCLUDED AND FLEXIBLE CONTROL

Wired controller to manage the unit is supplied with the unit.. Moreover, the unit is totally compatible with VRF control systems via centralized controls or BMS together with other indoor units of the system.

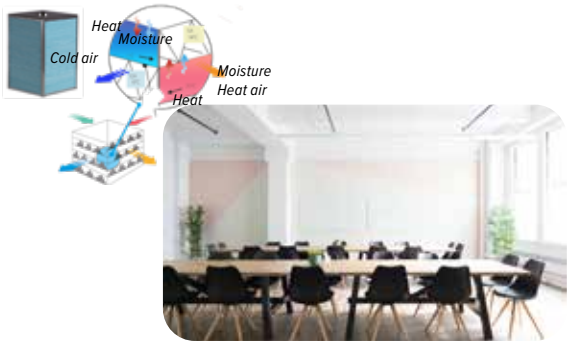
HRV-DXL-2 HEAT RECOVERY VENTILATOR WITH DX COIL

HRV-DXL-2-XMI D1500-D3100

NEW

ENHANCED EFFICIENCY

Heat recovery ventilator with coil DX HRV-DXL-2 combines technological advantages of enthalpic energy exchange between exhaust and supply air through a special core realized with pre-treated paper and of DX coil connected to VRF system to which is connected. Thus, the unit can both heat or cool and ventilate the rooms, improving both comfort and energy saving.



WIDER RANGE

In addition to the units of the HRV-DX-2 series with 500 and 1000 m³/h, the HRV-DXL-2 series can treat air flow rates up to 3100 m³/h, further expanding the offer of air handling units in combination with Clivet VRF systems.

HIGH FILTRATION GRADE AND AIR QUALITY

The healthiness of the air and the minimum fouling of the exchanger are guaranteed by filters F7 on the supply section and M5 on the exhaust section, in order to increase the air quality supplied to the environment. For maximum air quality, the Bioxigen® purification system is available as an accessory, which allows, through a controlled bipolar ionization process, multiple benefits such as an antibacterial effect and the removal of odors, pollutants, mold and pollen.

BYPASS FOR FREE COOLING

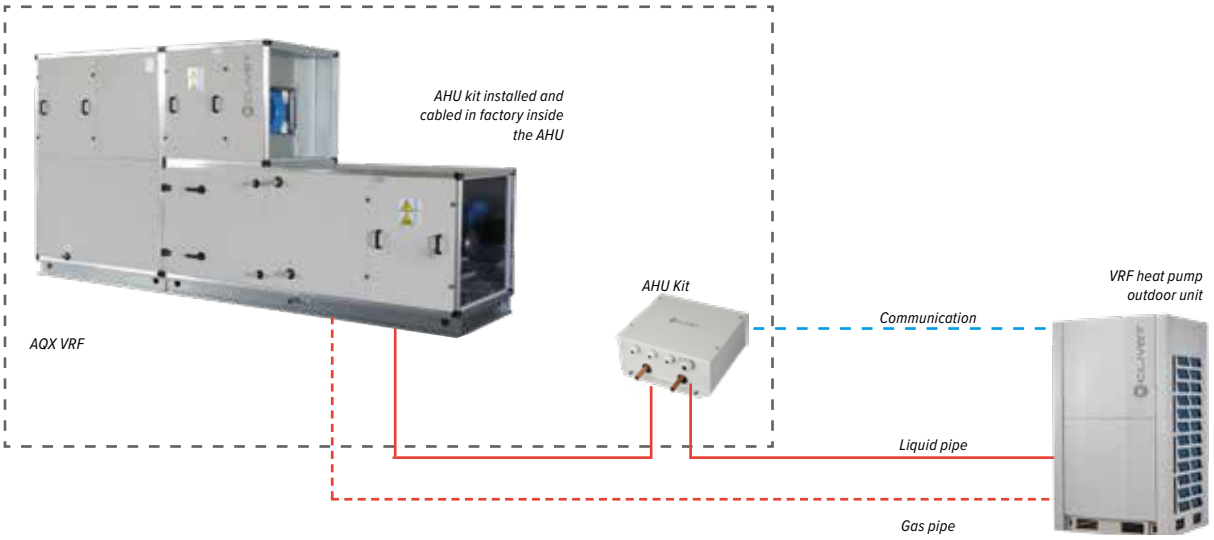
AQX VRF

AQX VRF 3000÷20000

DC INVERTER R-410A

EFFICIENT AND FLEXIBLE

Direct expansion coil air handling units combine fresh air ventilation with the flexibility and air conditioning efficiency typical of Clivet VRF systems.
The unit is easy to install: thanks to the dedicated kit to manage air handling unit pre-cabled and included in AQX VRF, it is sufficient to connect it to VRF system from refrigerant and electrical point of view.



ONE SOLUTION, TWO POSSIBLE CONFIGURATIONS

Designed to control return air temperature, the solution is available in two versions:
- AQX VRF standard ➜ 7 pre-defined configurations (3000, 5000, 7500, 10000, 12500, 15000, 20000 m³/h);
- AQX VRF custom ➜ completely configurable based on specific project needs (airflow range 500-48000 m³/h, capacity 2,2-224 kW), with multiple accessories available.

AQX VRF air handling units are available in single configuration connected in a 1-to-1 combination to a dedicated VRF outdoor unit (A), or in multiple configuration with more AQX VRF units connected to the same VRF outdoor unit (B), or in mixed configuration with other VRF indoor units all managed by the same VRF outdoor unit (C).

A

B

C

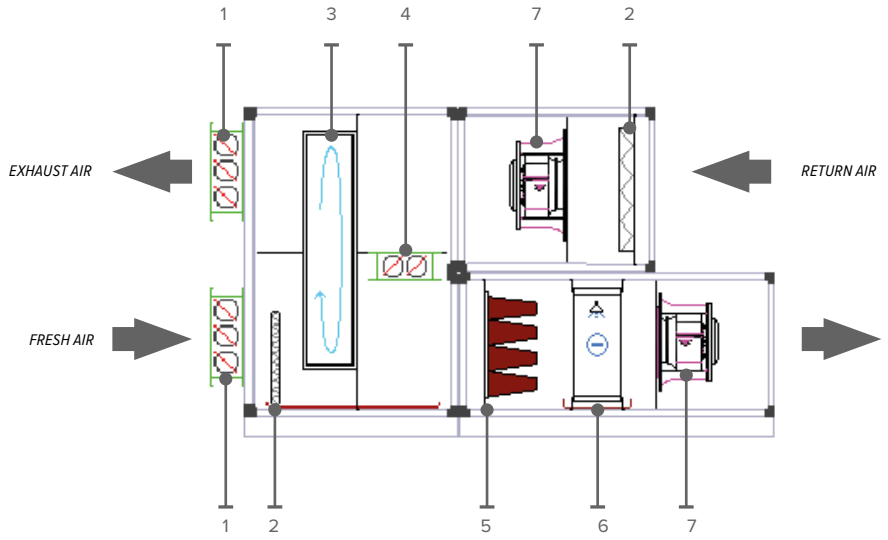
If managed with other VRF indoor units, AQX VRF capacity must not exceed 30% of that of the outdoor unit

AQX VRF Standard

AQX VRF STANDARD COMBINATIONS WITH VRF OUTDOOR UNITS

AQX VRF standard units are designed to be coupled with Clivet VRF outdoor units with the following combinations:

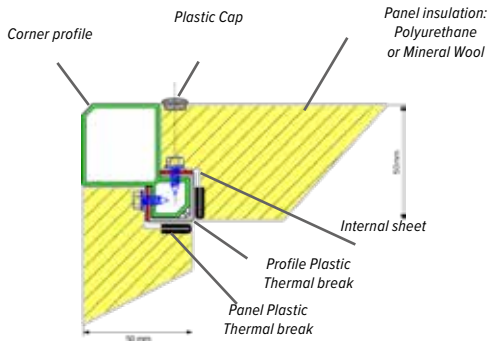
Size	AQX VRF	3000	5000	7500	10000	12500	15000	20000
Outdoor unit		MSAN-XMi 180T	MSAN-XMi 260T / MV6-XMi 252T	MSAN-XMi 400T / MV6-XMi 400T	MV6-XMi 500T	MV6-XMi 615T	MV6-XMi 730T	MV6-XMi 850T



(1) Damper
(2) Synthetic G4 filter
(3) Rotary enthalpic heat recovery
(4) Mixing damper regulated by integrated CO_2 sensor
(5) Rigid bag F7 filter
(6) Direct expansion coil for heating and cooling
(7) Plug fan EC brushless fan

STRUCTURE

Frame is composed of profiles having 50x50 mm sections for its light weight and extra corrosion resistance, ensuring the best thermal break. Profiles are double chamber type so that fixing screws are totally to have the maximum seal.
Closing panels are double skin type, with double sheet steel and insulation through polyurethane foam with gasket on all external perimeter for thermal break.



FILTERS

In order to provide quality of supply air, filter section is composed of synthetic G4 filters placed on exhaust and outdoor air sections and F7 rigid bag filter on supply air..

FANS

Supply and exhaust air fans are plug fan type, directly coupled to high efficiency EC brushless motor in order to ensure an external static pressure of 300 Pa.

ROTARY ENTHALPIC HEAT RECOVERY

Energy recovery from indoor exhaust air from is ensured by a rotary enthalpic heat recovery: in the first half of rotation, the sensible and latent heat is transferred to the heat-adsorbing materials of the wheel and gives that energy in the second part of rotation to the side that has lower energy.
The rotary wheel is composed of a special hygroscopic aluminum matrix designed with a special distribution to increase sensible and latent heat transfer area and efficiency.

MIXING DAMPER WITH INTEGRATED CO_2 SENSOR

In addition to bypass damper, AQX VRF air handling units are equipped as standard with a mixing damper with integrated CO_2 sensor. As a result, fresh air airflow is mixed with exhaust air from indoor in a variable percentage depending on environmental air quality measured in CO_2 ppm.
Besides a better energy efficiency, this system facilitates system start-up, accelerating steady operation of the plant

INTEGRATED ELECTRICAL BOX

Electrical panel, complete with VRF outdoor unit control interface, is included and pre-cabled inside the AQX VRF unit, strongly simplifying installing operations.

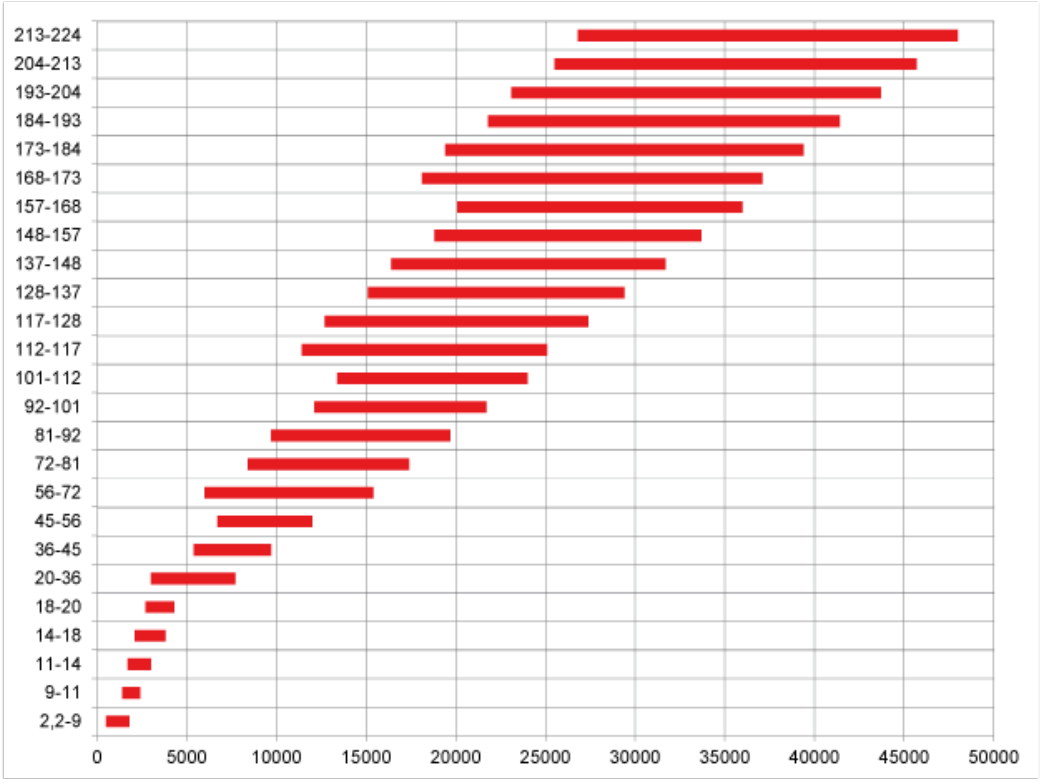
AQX VRF Custom

THE MOST FLEXIBLE AIR HANDLING UNITS THAT CAN BE COMBINED WITH VRF

In addition to AQX VRF standard version, multiple variations are available with direct expansion coil capacity ranging from 2,2 to 224 kW and airflow rate between 1500 and 48000 m³/h, in combination with various accessories depending on specific design needs.

Possible customizations can concern:
- Fans and motors
- Heat recovery section
- Filters
- Humidifiers
- Pre-heating, post-heating auxiliary sections
- Internal panels
- Silencers
- Additional accessories



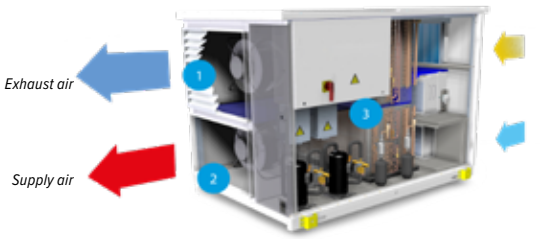
ZEPHIR^3

CPAN-XHE3 SIZE 1÷SIZE 6

DC INVERTER | R-410A | CONTROL SYSTEM SPLIT VRF

THE WHOLE PRIMARY AIR PLANT IN A SINGLE STAND-ALONE SYSTEM

ZEPHIR3 contains all the components required to operate perfectly. These have already been optimised and tested by Clivet to ensure 100% efficient and reliable results.
Built-in controls allow operation with constant supply temperature, at maximum available capacity, at high airflow.
Central and local application.



(1) Air return and exhaust section with energy recovery
(2) Fresh air handling and inlet section
(3) Thermodynamic inverter and manage and control electronics section

EFFICIENT AND RELIABLE

Reversible heat pump technology:
- Recovers energy from exhaust air, a heat source that is favourable and steady over time
- The active thermodynamic circuit produces capacity amplifying the energy contained in the exhaust air
- The capacity produced satisfies most of the whole system's demand
- Eliminate the waste typical of central systems, such as pumping, storage, thermal loss on the pipework
- 30% saving on ventilation

SELF CONTAINED. EASY

It autonomously produces heating and cooling capacity to handle Primary Air:
- No connection to external heating and cooling stations
- 80% less works on site
- Industrial product optimized and tested for maximum reliability of results

CONTINUOUS HUMIDITY CONTROL

The quality of the indoor air depends largely on humidity: one of Primary Air system's main tasks is to control it. In summer mode, ZEPHIR^3 always dehumidifies outdoor air via the thermodynamic circuit. Therefore it corrects the temperature until it reaches the supply air desired value, free of charge, thanks to the post-heating modulating system with hot gas recovery. In winter mode, when required by the outdoor conditions and system application, ZEPHIR^3 can humidify renewal air with the optional steam section, with immersed electrodes or steam-powered section.

NO CROSS CONTAMINATION

A resistent steel wall keeps the two flows separate. All the technological components are located in individual compartments that can be easily accessed for routine maintenance.

COMPACT

Requires 50% less space compared with a primary air handling unit at modular sections. It has already all the settings and power components.

NO WASTE FILTRATION

High efficiency electronic filters:
- Equivalent to the traditional H10
- Negligible pressure drops
- Savings on ventilation above 10% compared with conventional filters.

UNIFIED CONTROL ZEPHIR^3+VRF

NEW

By providing the VRF gateway option, the Zephir^3 units can be managed from the CCM270 centralized touchscreen control in addition to the VRF systems, to the benefit of plant management.

Erp (Energy Related Products) European Directive, that includes the Commission delegated Regulation (EU) No 2016/2281 also known as Ecodesign Lot21, does not report this Product category.

DB = dry bulb; WB = wet bulb; EERc = Thermodynamic efficiency of the system in cooling;

COPc = Thermodynamic efficiency of the system in heating

(1) Outdoor air temperature: 35°C D.B. / 24°C W.B; Exhaust air temperature: 26°C D.B. Supply air humidity ratio: 11g/kg; Supply air temperature: 24°C D.B.

(2) Outdoor air temperature: 7°C D.B./6.0°C W.B. Exhaust air temperature: 20°C D.B./ 12°C W.B; Supply air temperature: 20°C D.B.

(3) Outdoor air temperature: 35°C D.B. / 24°C W.B; Exhaust air temperature: 26°C D.B. Supply air humidity ratio: 11g/kg

(4) Outdoor air temperature: 7°C D.B./6.0°C W.B. Exhaust air temperature: 20°C D.B./ 12°C W.B; Supply air temperature: 28°C D.B.

(5) Outdoor air temperature: 35°C D.B./ 24°C W.B; Exhaust air temperature: 26°C D.B. Supply air temperature: 22°C D.B.

(6) Outdoor air temperature: 7°C D.B./6.0°C W.B. Exhaust air temperature: 20°C D.B./ 12°C W.B; Supply air temperature: 16°C D.B.

(7) ROT = rotary compressor; SCROLL = scroll compressor

(8) RAD = radial fan

(9) In case of use with high air flow only the maximum flow rate value is possible

(10) The sound pressure level is referred at a distance of 1 m from the ducted unit surface operating in free field conditions. External static pressure 50 Pa. Please note that when the unit is installed in conditions different from nominal test conditions (e.g. near walls or obstacles in general), the sound levels may undergo substantial variations. Sound levels refer to unit with standard air flow rate

versions,configurations and accessories

RTA	Active thermodynamic recovery (Standard)
RECH	Hydronic recovery device for extended operating range
EPWRC	EXTRAPOWER-C (with additional chilled water heat exchanger)
EPWRH	EXTRAPOWER-H (with additional hot water heat exchanger, without electronic filters)
CCA	Copper/aluminium exchanger on exhaust air with acrylic lining
CEA	Copper/aluminium exchanger on outdoor air with acryic lining
PVARC	Variable air flow on supply and exhaust with CO_2 probe
PVARCV	Variable air flow on supply and exhaust with CO_2+VOC probe
PVARP	Variable air flow on supply and exhaust air with supply pressure probe
MHSEX	Immersed electrodes steam humidifying module
MCHSX	Steam-powered humidifying module
MOB	Serial port RS485 with Modbus protocol
LON	Serial port RS485 with LonWorks protocol
CPHGM	Refrigeration circuit with capacity modulation(Standard)
IO	Outdoor installation (Standard)
II	Indoor installation
BACIP	BACnet-IP serial communication module
VSXSA	Modification of the supply humidity ratio setpoint "X_SA"
DESM	Smoke detector
AMRX	Rubber antivibration mounts
AMRUX	Rubber antivibration mounts for unit and humidification module
RSSX	Remote supply air sensor
PTCO	Set up for shipping via container
F7	High efficiency F7 air filter (ISO 16980 ePM1 60%)
VRF	VRF Gateway

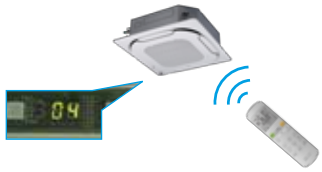
WIRELESS REMOTE CONTROLLER

BACKGROUND LIGHT

The background light allows users to operate the device in the dark. The device lights up when a button is pressed, and turns off when the selected operation is completed.

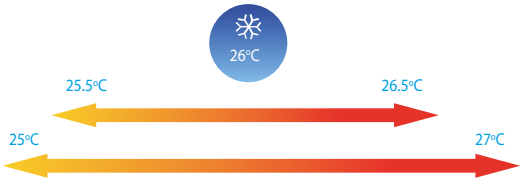
ADDRESS SETTING

In addition to the unit's auto addressing function, users can set the indoor unit's address on the wireless remote controller.



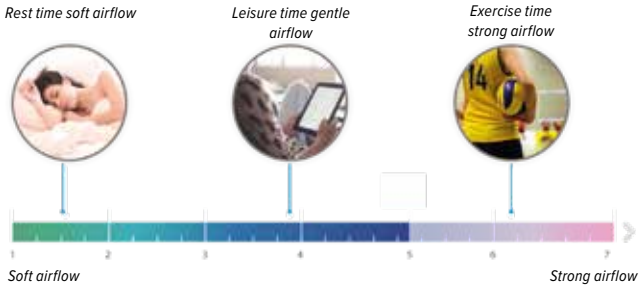
TEMPERATURE SETTING

Set temperature can be adjusted in 0.5°C or 1°C steps, enabling precise comfort control.



7-SPEED FAN CONTROL

7 indoor fan speeds provide control flexibility to meet the needs of different indoor conditions.

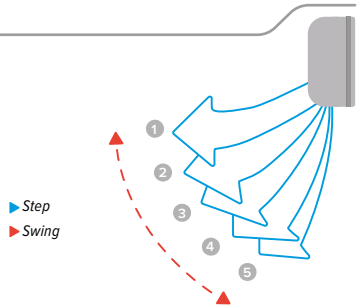


FOLLOW ME

With the follow me function, the indoor unit responds to the temperature measured by the temperature sensor built-in to the wireless remote controller, rather than the temperature sensor in the indoor unit itself, enabling more precise control of the temperature in the user's immediate environment.

5-STEP SWING LOUVER

The air is comfortably spread upwards and downwards thanks to the 5-step swing louver that can be programmed via the controller.



DISPLAY SHUT-OFF

Indoor unit displays can be shut off at night, creating a better environment for rest.

ECO MODE

Eco mode saves energy whilst retaining a comfortable indoor environment.

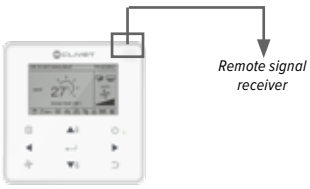
WIRED CONTROLLERS

REMOTE SIGNAL RECEIVER

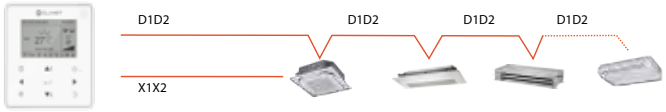
A signal receiver is incorporated into the controllers, allowing the system status to be adjusted using a remote control.



WDC-120G/WK

GROUP CONTROL*

One controller can be used to unify the settings across up to 16 indoor units.



* Function available for WDC-120G/WK controller

SILENT MODE

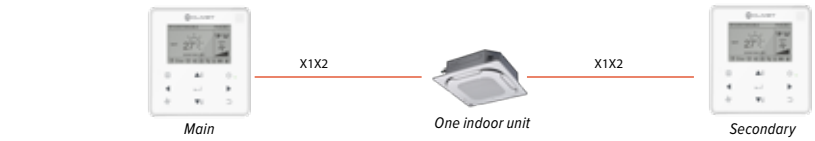
In cooling and heating modes, selecting silent mode reduces the fan speed, lowering the running noise and creating a quieter environment.

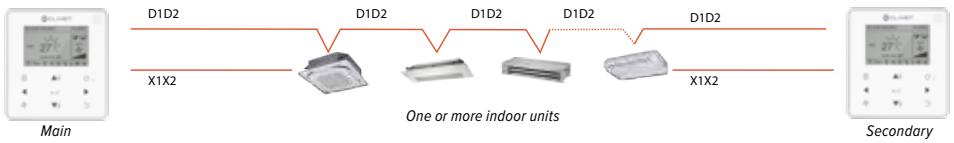
2 PERMISSION LEVELS

2 permission levels ensure users can easily access control functions and allow administrators convenient access to operating parameters.

MAIN OR SECONDARY CONTROLLER SETTING

Two controllers can be used together, with the indoor units' operating mode and settings being set according to the most recent instruction received. The controller display screens are synchronized so that both displays update when a setting is adjusted.





Two group management controls available for WDC-120G/WK controller

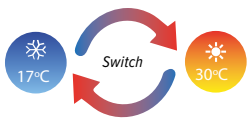
EXTENSION FUNCTION*

The extension function is specifically designed for users working overtime. Pressing the delay button postpones system shutdown by 1 or 2 hours.

* Function available for WDC-120G/WK controller

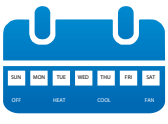
DUAL TEMPERATURE SET POINTS

With dual temperature set point control, in auto mode, it is possible to control in a customized way set temperatures for which units switch automatically between heating and cooling mode, adapting each indoor unit to specific users' needs.



WEEKLY SCHEDULE TIMER

The weekly schedule timer allows users to set multiple schedules each with its own operating mode, temperature settings and fan speeds.



"Function available for WDC-120G / WK command "

BI-DIRECTIONAL COMMUNICATION

The wired controller can query the system operating parameters thanks to the new bi-directional communication functionality. In addition, settings including static pressure, cold draft prevention and temperature compensation can be configured on the wired controller.

ADVANCED CENTRALIZED CONTROLLERS

CONTROL SYSTEM
SPLIT VRF
CCM-270A/WS

TOUCH SCREEN

The colorful touch screen and lively display make the interface more convenient and simple.

UNIT MODEL RECOGNITION

The controller recognizes the model of indoor and outdoor units and different models are represented by different icons.

GROUP MANAGEMENT

Units can be viewed according to group, system or location, making unit management clearer and more convenient.

SCHEDULE MANAGEMENT

Daily, weekly or annual schedules can be used to set unit settings such as on/off, operating mode, set temperature, fan speed and swing.

ENERGY MANAGEMENT

User can set limits or locks on an indoor unit, such as minimum cooling temperature, maximum heating temperature, fan speed lock, operation mode lock, swing lock, remote controller lock and wired controller lock.

VISUAL SCHEMATIC

By importing floor plans and then dragging and dropping the indoor units to their actual positions on the floor plan, users can create a tailored system schematic which enables monitoring and control of the indoor units through a clear visual representation of the system layout.

* Function available for CCM-270A/WS controller

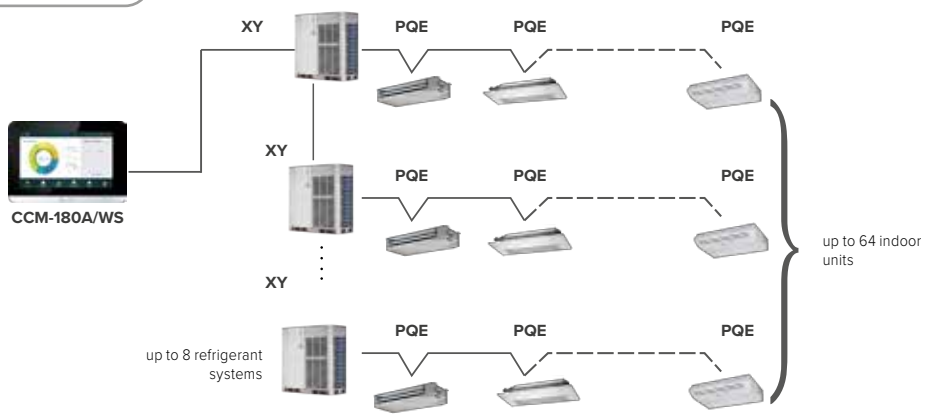
LAN ACCESS

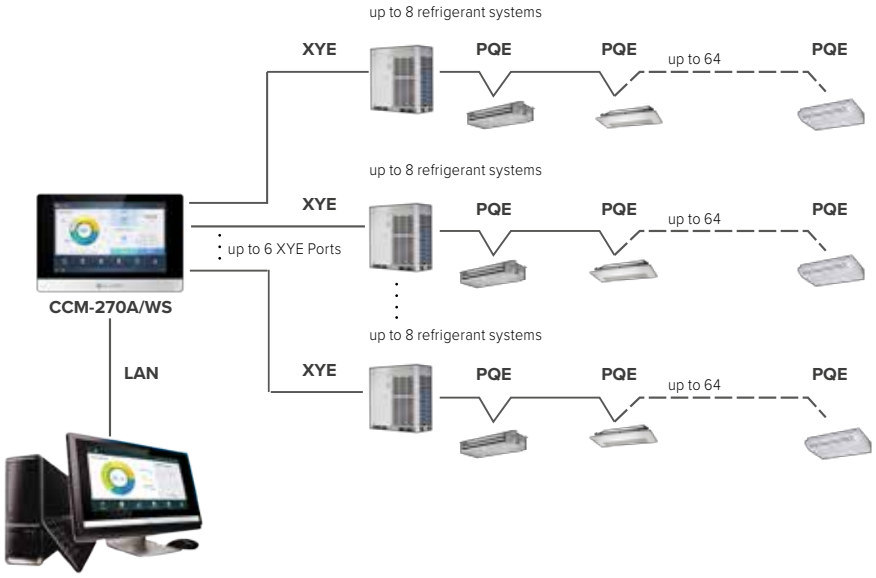
A desktop or laptop PC can be used for browser-based access via a LAN connection.

* Function available for CCM-270A/WS controller

WIRING SCHEME

The controllers can be connected to the master outdoor unit directly.





features

	CCM-180A/WS	CCM-270A/WS

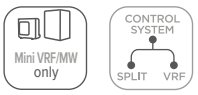
*Not compatible with mixed VRF/SPLIT systems. VRF mixed systems are possible between MV6, MV6i and MV6R OR between Mini VRF and MW.

Not compatible with HWM-2-XMi high temperature hydro module management.

technical data

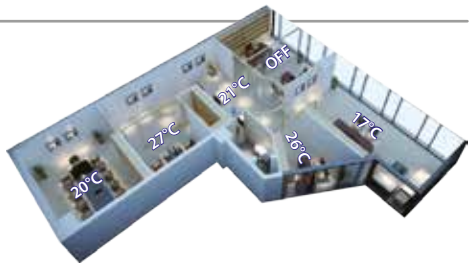
		CCM-180A/WS	CCM-270A/WS
Dimensions (Width x Height x Depth)	mm	182x123x34	270x183x32
Power supply	-	100-240V (50/60Hz) (adapter supplied)	24V AC (adapter not included)

SIMPLIFIED CENTRALIZED CONTROLLERS



CENTRALIZED CONTROL

Centralized controllers are multifunctional devices that can control up to 64 indoor units within a maximum connection length of 1200 m. Users enjoy the flexibility of either controlling multiple units as a group or assigning individual temperature settings to each unit.



MULTIPLE LOCK MODES

In addition to locking the centralized controller's own keyboard, the centralized controller may also be used to lock each unit's operating mode or remote controller.

- Locking Running Mode
- Locking Remote Controller
- Locking Keyboard

WIRING FLEXIBILITY

To simply and centralize wiring configurations, centralized controllers can be connected directly to the master outdoor unit. In addition to the CCM30, the CCM15 can be connected in series with external units of the Mini VRF, MHR and MW series.

MULTI-SYSTEM CONTROL

Ensure the address is not repeated. Units can be from different systems, with up to 64 indoor units. This greatly reduces system limitations.

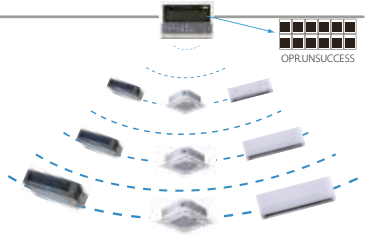
With 2-pipe systems, all the indoor units must operate in the same mode. With 3-pipe systems, the indoor unit operation mode may be set as required.

CLEAN FILTER REMINDER

The CCM30 centralized controller records the total running time of each indoor unit. When the accumulated running time reaches the value pre-set by the user, the system reminds the user to clean the indoor unit's filter, ensuring that the airflow does not become obstructed.

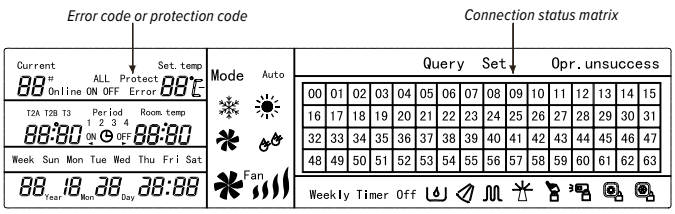
SINGLE/UNIFIED CONTROL MODE

Controllers can be toggled between unified and single control modes, to enable either unified control of all units or control of a specific unit. Operating mode feedback is used to ensure that all units are operating in the mode specified by the user.



INDOOR UNITS OPERATING STATUS DISPLAY

Error and protection codes are shown directly on centralized controllers' displays, avoiding the need to access outdoor units' PCBs to obtain codes during a system event. A wide range of error and protection codes provide system status information to building management professionals before contacting a service engineer.



STYLISH DESIGN

The stylish design of centralized controllers complements the interior ambience of high-specification homes and workplaces.

features

	CCM30-B
Max. number of indoor units	64

DATA CLOUD CONVERTER

The cloud server controller enables remote control on the VRF system through the Internet.
Smart phones, tablets, laptops, and desktop PCs can serve as a web controller for up to 64 indoor units.

SIMPLE CONTROL INTERFACE

- Software control/ Cloud server control (WEB access).
- Click & Operate: the user-friendly interface.
- Allows single and group control.
- Simplified user control interface.
- Color indication and icons makes it easy to recognize unit status.
- Includes a full-screen display, and allows temperature adjustment by swiping.

WEB SITE CLOUD SERVER

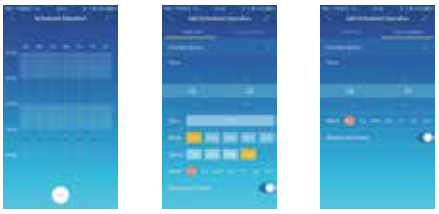
In addition to the app, you can check and monitor the status of the system at any time and anywhere from the cloud server website

GROUP CONTROL

Different groups can be created to manage multiple indoor units simultaneously with a single touch

WEEKLY SCHEDULE CONTROL

Users can set a weekly schedule either for specific units or for groups of units. Each day may be divided into multiple sections. The controller automatically controls each units' on/off status, operating mode, fan speed and temperature settings according to the schedule.

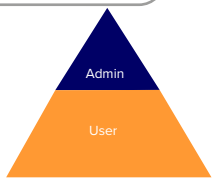


CLEAR ICONS

The operating mode can be seen at first glance through colored icons.

2 USER LEVELS

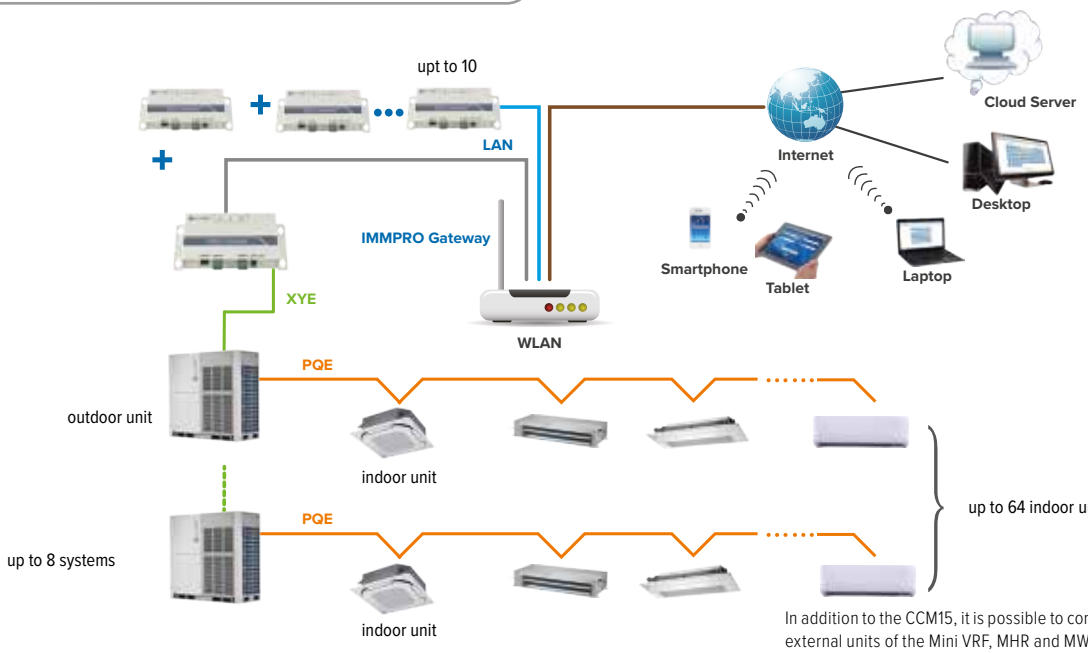
The administrator can set up different sub-users with different permissions to better manage the system.



ADDED CONVENIENCE

The air conditioner can be remote controlled by a phone or tablet.
Query and control the running state of the A/C anytime, anywhere, and schedule queries and actions in advance.
Remotely turn off the air conditioner to avoid wasting power.

WIRING SCHEME



In addition to the CCM15, it is possible to connect the CCM30-B in series with external units of the Mini VRF, MHR and MW series

IMMPRO NETWORK CONTROL SYSTEM

VRF MV6/MV6i /MV6R only

IMMPRO network control system is specially designed to control VRF systems. With a centralized system architecture, it monitors and controls all the parameters and functions of the VRF system. IMMPRO's built-in flexibility suit it to building solutions that vary widely in scale, purpose and control schema.

USER-FRIENDLY INTERFACE

Simple, practical user interface makes for a user-friendly experience even for first-time users.

OUTDOOR UNIT CONFIGURATION

Outdoor unit configuration and settings can be monitored and controlled without having to go outdoors.

ELECTRICITY CHARGE DISTRIBUTION

The IMMPRO uses a patented Calculation Method to estimate the electricity consumption of the outdoor units and then divide it among the indoor units so that the electricity charges can be equitably divided among building occupants.

VISUAL SCHEMATIC

By importing floor plans and then dragging and dropping the indoor units to their actual positions on the floor plan, users can create a tailored system schematic which enables monitoring and control of the indoor units through a clear visual representation of the system layout.

PUBLIC AND IDLE DEVICES

Marking a unit as a public device or idle device ensures the electricity charge distribution is more accurate and reasonable.

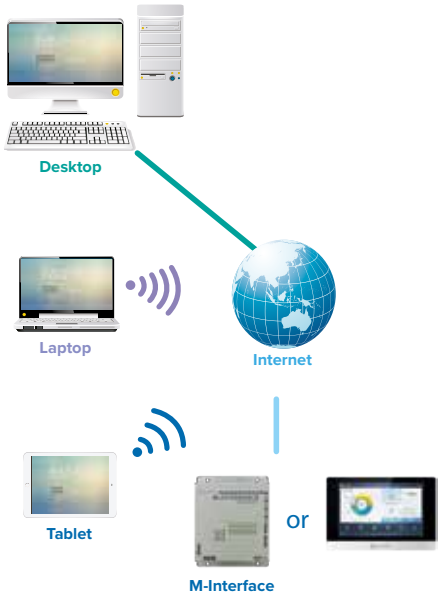
SCHEDULE MANAGEMENT

Daily, weekly or annual schedules can be used to set unit settings such as on/off, operating mode, set temperature, fan speed and swing.

XPRESS INSTALLATION

With the Xpress Installation wizard, IMMPRO can be installed quickly and easily without requiring support from a technical support engineer.

LAN access



Access from remote VPN

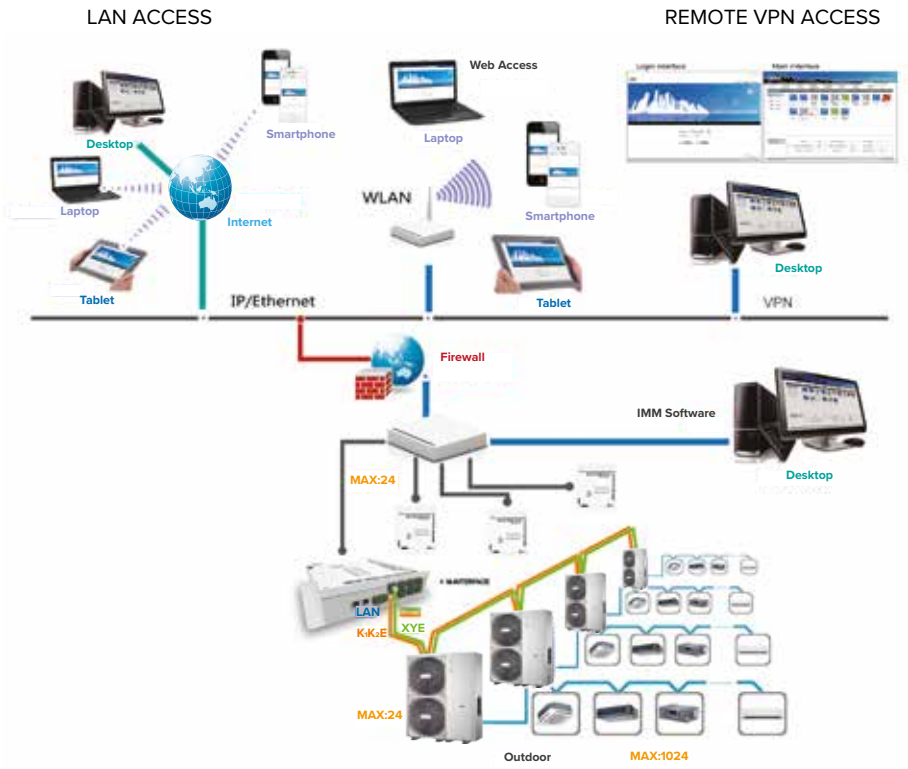
IMM NETWORK CONTROL SYSTEM

Mini VRF/MW only

IMM network control system is specially designed to control VRF systems. With a centralized system architecture, it monitors and controls all the parameters and functions of the VRF system. IMM's built-in flexibility suit it to building solutions that vary widely in scale, purpose and control schema.

NETWORK CONTROL

- Compatible with Windows XP 32 bit, Windows 7 32/64 bit and Windows 8
- Browser-based access on a PC, tablet computer or smart phone
- Remote access via VPN link to network allows anytime, anywhere monitoring and control
- Full support for access via IE, Firefox, Safari and Chrome



SIMPLE OPERATION AND MANAGEMENT

- Flexible and highly efficient centralized management system
- User-friendly 'click and operate' interface allows non-experts to easily run the building management system

VISUAL SCHEMATIC

By importing floor plans into IMM and using the drag and drop interface to position the indoor units on the floor plan,
users can create a tailored system schematic which enables monitoring and control of each unit's status and parameters
through a clear visual representation of the system layout.

WEB ACCESS FUNCTION

A PC, tablet computer or smart phone can be used for browser-based access to IMM via a LAN connection or VPN/WAN connection. Using a VPN link on a WAN enables remote anytime, anywhere access, allowing facilities management professionals to monitor and control VRF systems whilst on business trips or working from home. Up to four registered users may connect concurrently.

WAN access needs to set up the VPN.

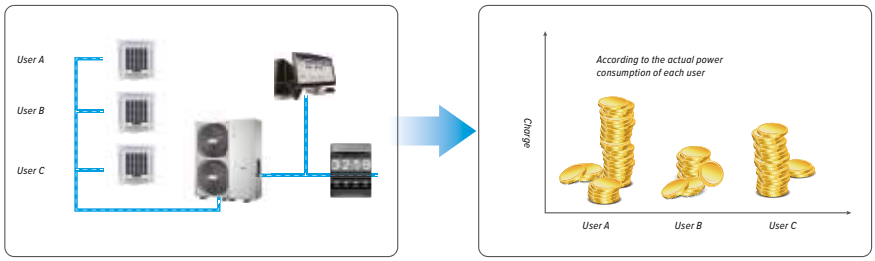
SCHEDULE MANAGEMENT

A daily or weekly schedule can be set to control the on/off status, operating mode, temperature setting and remote control lock status of each indoor unit.

- Daily/weekly task scheduling
- Individual schedules can be applied to each indoor unit
- Advanced energy conservation options

ELECTRICITY CHARGE DISTRIBUTION (PATENTED)

IMM uses the patented Calculation Method to estimate the energy consumption of each indoor unit (or group of units) in order that air conditioning electricity charges can be equitably divided among building occupants. The Calculation Method takes account of temperature setting, room temperature, return air temperature, operating mode, running time, refrigerant flow, indoor unit power rating and nighttime use to estimate the energy consumption of each indoor unit before apportioning the estimated energy consumption of units in public areas among building occupiers. Unit-by-unit electrical energy consumption data also greatly facilitates the optimization of energy consumption management.



ENERGY MANAGEMENT

Based on a predetermined schedule, the Intelligent Manager executes capacity control and intermittent operations on all air conditioning units to maintain a high comfort index.
User can set a limit on any running unit, any parameter, such as cooling temp., heating temp., fan speed, operation mode, and so on*.

- Meet with the Public building energy efficiency management regulations.
- Matches the corresponding indoor units.

AUTOMATIC OR MANUAL NETWORK CONFIGURATION

IMM offers a choice of automatic or manual network configuration.

Automatic configuration

Each IMM controller can support up to 4 refrigerant systems, 16 outdoor units and 256 indoor units.

Manual configuration

Each IMM controller can support up to 16 refrigerant systems, 64 outdoor units and 256 indoor units.

DATA BACKUP

Double data backup stored on the IMM controller and IMM database.
The IMM controller automatically backs up power data for 1 or 2 months if a system failure occurs.
Examples: if there is a PC power failure or a system crash, the IMM controller will automatically backup the data to the gateway.
IMM software also stores running data on the software database.

ZONE MANAGEMENT

Zones can be set up to enable the easy management of areas with differing heating/cooling requirements such as offices, restaurants, gyms and lobbies.

MULTIPLE LANGUAGE OPTIONS

Nine languages are supported and can be selected by the user:

- English
- French
- Italian
- Russian
- German
- Spanish
- Simplified Chinese
- Polish
- Korean

BACNET® GATEWAY

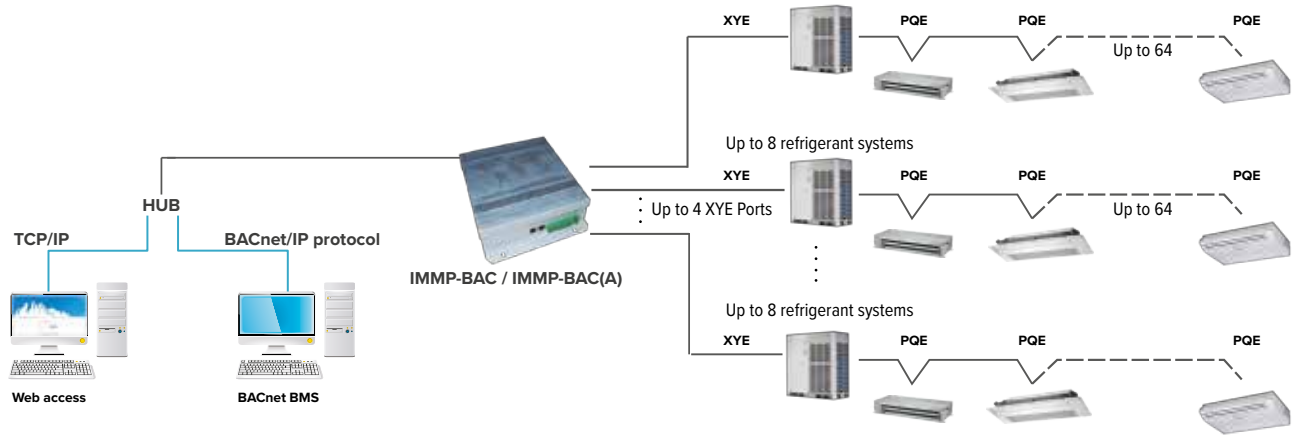
CONTROL SYSTEM
SPLIT VRF

FULL INTEGRATION

Bacnet Gateway allow VRF systems to be monitored and controlled alongside other building management technology that use the BACnet protocol such as access control, fire detection and lighting systems.

WIRING SCHEME IMMP-BAC / IMMP-BAC(A)

The gateway can be connected directly to the XYE ports of the master external units.



WIRING SCHEME CCM08

The gateway can be connected to an outdoor unit's XYE or K1K2E
It is also compatible with connection to an CCM30 centralized controller, through F1F2E port.

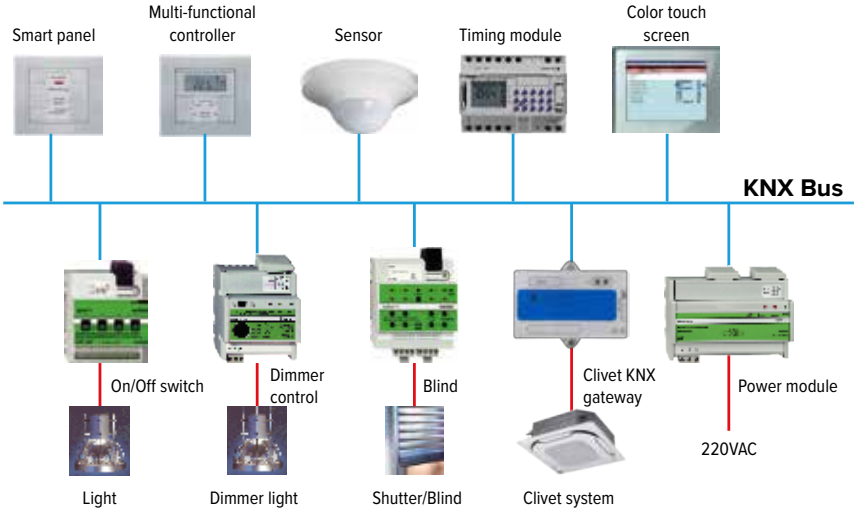
KNX GATEWAY

FULL INTEGRATION

KNX Gateway enable full integration of Clivet VRF systems with home and building management systems built on the NKX network communications protocol.

BROAD INTEGRATION

Being compatible with the KNX protocol means that Clivet's VRF air conditioners can be integrated into control systems alongside the wide range of KNX compatible products that are available.



WIRING SCHEME

Each Gateway can be connected to each indoor unit on D1D2E port.

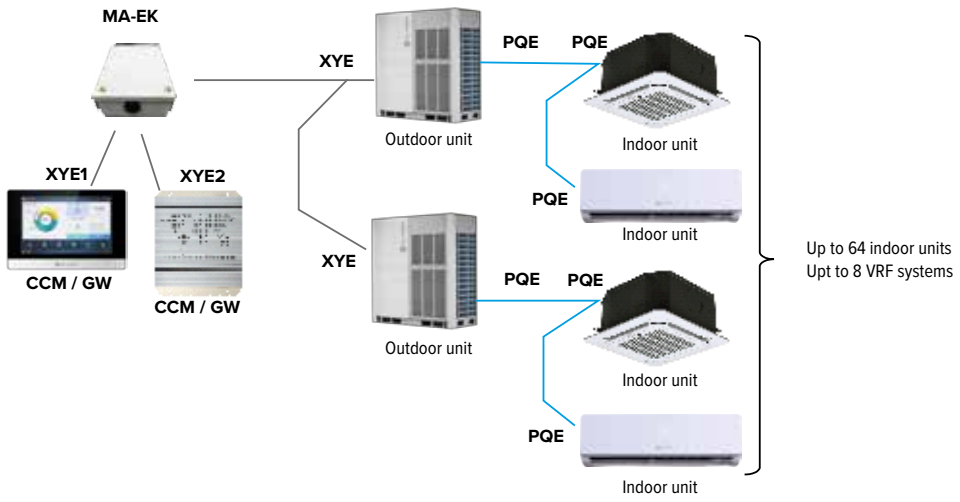
XYE EXTENSION KIT

PRACTICAL CONNECTION IN ONE POINT

The XYE duplication kit allows to connect 2 centralized controls or gateways to the same system in a single point on the external units.
In this way it is possible to manage the VRF systems by combining different control interfaces, to the advantage of plant flexibility.

INSTALLATION SCHEME



technical data

		MA-EK
Dimensions (Width x Height x Depth)	mm	225x128x28
Power supply	-	12V DC (adapter not included)

INFRARED SENSOR CONTROLLER

Using infrared sensors to detect movement, the NIM09 Infrared Sensor Controller automatically turns indoor units on or off upon sensing that the room is occupied or unoccupied. Suitable for hotels, offices, conference rooms and residences, the Infrared Sensor Controller ensures climate control whilst minimizing energy consumption.

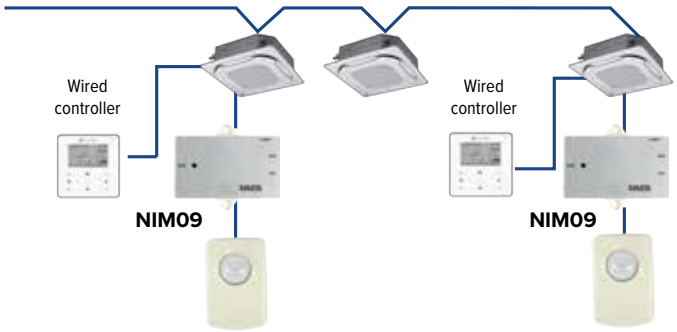
- Automatically extends shut down time to avoid frequent on/off actions
- Simple design discretely blends in with hotel, office or apartment complex decors

FLEXIBILITY

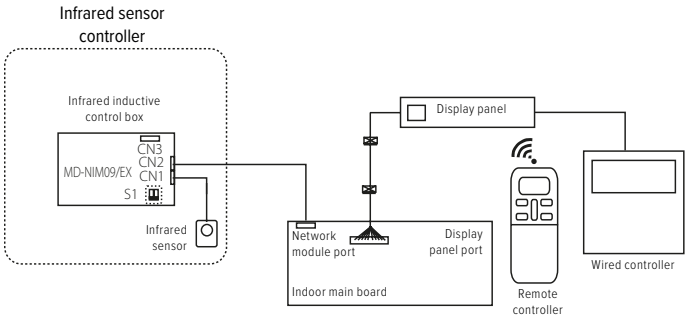
The sensor may be fixed either to a wall or a ceiling, providing flexibility to tailor the arrangement of sensors to the particular geometry of any space. Users may additionally use remote or wired controllers to adjust the air conditioning settings.*

* Wired controls compatible with NIM09 only if connected via display board

INSTALLATION SCHEME



ELECTRICAL WIRING



technical data

		NIM09
Sensor - Dimensions (Width x Height x Depth)	mm	30x46x25.6
Control box- Dimensions (Width x Height x Depth)	mm	72.8x86x15.5
Power supply (from IDU)	-	DC 5V

REMOTE SENSOR PACKAGE

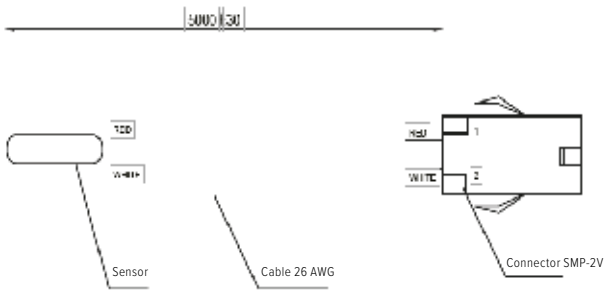
ROOM TEMPERATURE READING IN THE RIGHT PLACE

Remote room temperature sensor RT01 allows to regulate indoor unit operation depending on air temperature read by its probe instead of temperature sensor placed on return air.
Ideal for applications in which it is required to control systems exclusively via centralized controllers or BMS and user prefers not to install remote controllers locally, this sensor allows to read air temperature in the most representative point in the room and to regulate the indoor unit consequently

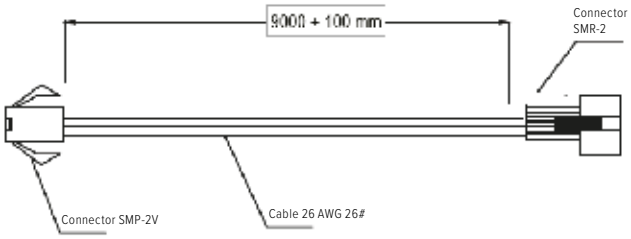
SENSOR SUPPLIED WITH EXTENSION CABLE TO MEET EVERY NEED

Accessory is composed of a 5 m temperature sensor and of a 14 m adapter working as an extension cable, for a total length of 14 m. In this way every possible installation in terms of distance between indoor unit and detection point can be realized.

Remote sensor:



Extended connecting wire:



INSTALLATION SCHEMATIC

Temperature sensor installation is extremely simple: it is sufficient to disconnect return air thermistor pre-cabled by factory from unit PCB and replace it with adapter cable connector, once connected it to temperature sensor.

CONTROL SYSTEMS

technical data

		RT01
Lenght	mm	1400 (= 5000 + 9000)
Power supply	-	DC 5V

DIGITAL POWER METER

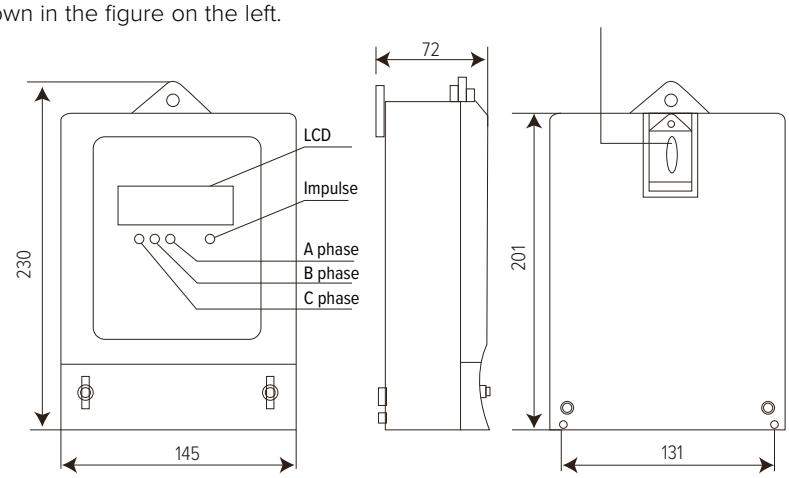
The DTS634 (380V, 50 Hz, 60A) and DTS634-F (380V, 50 Hz, 100A) digital energy meters can be fitted to outdoor units (on a one meter per unit basis) to measure power consumption.

LOW POWER CONSUMPTION

The digital power meter consumes minimal energy.
Voltage circuit: less than 2W/10VA
Current circuit: less than 2.5VA

INSTALLATION SCHEMATIC

The digital power meter is tested after manufacture so it can be immediately deployed and used on-site. The LED indicators and installation schematic are shown in the figure on the left.



It is recommended to install Online Kit MCAC-PIDU accessory if it is required electricity charge distribution among different tenants requiring independent power supply for indoor units.

technical data

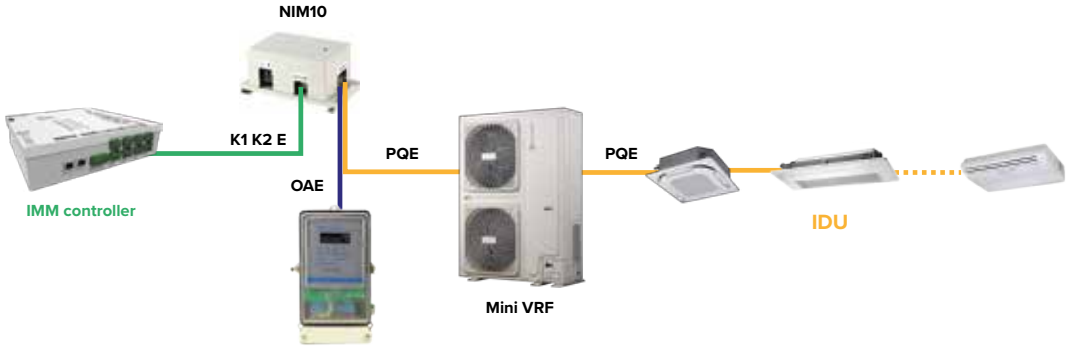
NETWORK ELECTRICITY DISTRIBUTION MODULE

SIMPLE DESIGN

- External contact interface module
- Designed specifically for Mini VRF up to 180T size
- Provides the OAE ports for Mini VRF to connect with the IMM network control system, and distributes electricity across the network.

WIRING DIAGRAM

OAE ports: connects to the OAE port of the ammeter.
PQE ports: connects to the PQE port of the outdoor unit.
Each port on IMM controller can only be connected with one NIM10 through K1K2E ports.



technical data

		NIM10
Dimensions (Width x Height x Depth)	mm	150x85x70
Power supply	-	198-242V (50/60Hz)

ONLINE KIT

IDEAL FOR MULTI-TENANT APPLICATIONS

The online kit, to be provided for each indoor unit in the system, allows to provide separate power supplies between the different room terminals. The accessory, in fact, brings voltage to the expansion valve of the indoor unit, ensuring its closure and isolating from the refrigerant point of view in case of power failure.
In this way, in case it is required to disconnect the power supply and section a part of the system (e.g. disconnection of voltage from a tenant), the rest of the system continues to operate regularly, avoiding anomalies.

NEW

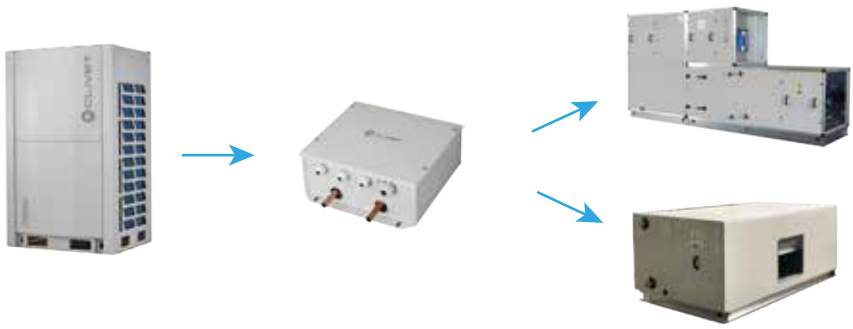
AHUKZ-03D
36-56 kW

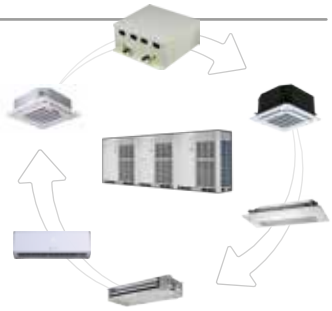
MULTIPLE WAYS OF USE

The units managed through the kit can be managed in a simplified way through the Clivet wired control provided, making the main settings from the control and letting the module send and receive the signals directly to the unit.
For applications requiring greater complexity, it is possible to interpose a third party controller (PLC) delegating to it the control of the equipment and communicating with the VRF system through the AHU kit by means of input/output signals.
In this way it is possible to guarantee maximum flexibility of use and customisation of the functions specifically required by each application.

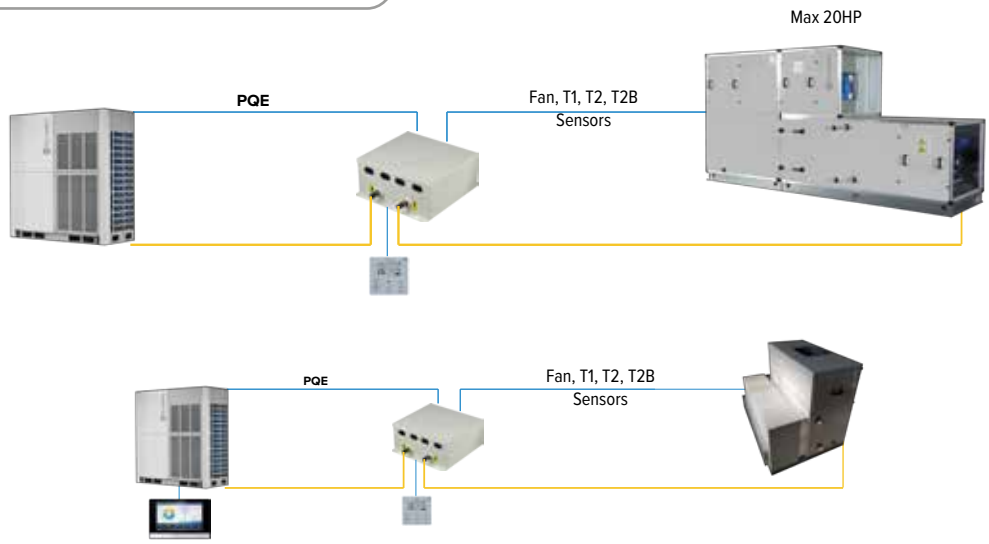


INTEROPERABILITY

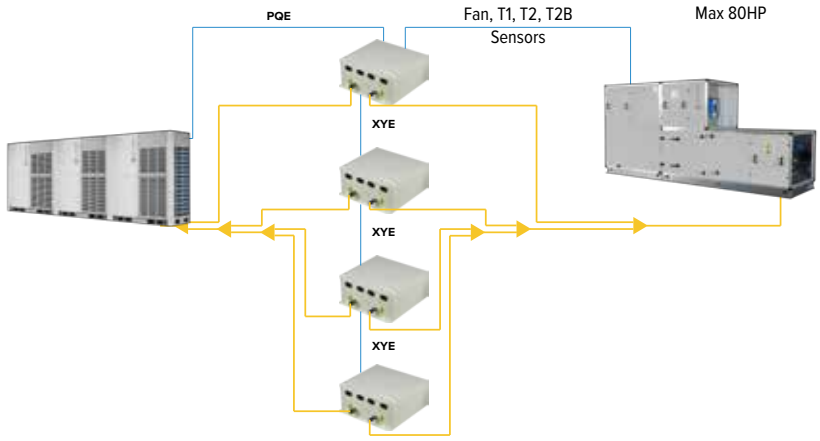
AHU kit can be used to connect VRF outdoor units with direct expansion air handling units or compatible other-brand AC fan motor indoor units, giving flexibility to adapt to the specific needs of each large project.
AHU kits are compatible with Clivet VRF systems in combination also with all other indoor units series. Whole system can be managed via centralized controllers or other gateways.



SINGLE AHU CONTROL BOX CONNECTION



MULTI AHU CONTROL BOXES CONNECTION



technical data

		AHUKZ-00D	AHUKZ-01D	AHUKZ-02D	AHUKZ-03D
Air flow range	m³/h	500 ~ 1800	1400 ~ 4300	3000 ~ 7700	5400 ~ 12000
Capacity range	kW	2,2 ~ 9	9 ~ 20	20 ~ 36	36 ~ 56
Dimensions (Width x Height x Depth)	mm	344x360x125	344x360x125	344x360x125	344x360x125
Power supply	-	220-240V (50/60Hz)	220-240V (50/60Hz)	220-240V (50/60Hz)	220-240V (50/60Hz)

		CE-AHUKZ-00B	CE-AHUKZ-01B	CE-AHUKZ-02B	CE-AHUKZ-03B

Power supply	-	220-240V (50/60Hz)	220-240V(50/60Hz)	220-240V(50/60Hz)	220-240V(50/60Hz)

*AHUKZ-**B available while stocks last.

AHUKZ-**D compatible with MV6R series in addition to other outdoor units already compatible with kit "B" and possibility to control supply air temperature in addition to return air temperature control and 0-10V signal for capacity step

BRANCH JOINTS

Type		Name	Packed Dimensions (mm)	Gross Weight (kg)	Description
Branch joint for heat pump outdoor unit		FQZHW-02N1D	255×150×185	1,5	For two MW series outdoor units connection
		FQZHW-02N1E	255×150×185	2,0	For two MV6 series outdoor units connection
		FQZHW-03N1D	345×160×285	3,4	For three MW series outdoor units connection
		FQZHW-03N1E	345×160×285	4,3	For three MV6 series outdoor units connection
Branch joint indoor unit		FQZHN-01D	290×105×100	0,4	A*<16.6/16.8kW
		FQZHN-02D	290×105×100	0,6	16.6/16.8kW≤A*<33kW
		FQZHN-03D	310×130×125	0,9	33kW≤A*<66/71kW
		FQZHN-04D	350×180×170	1,5	66/71kW≤A*<92/104kW
		FQZHN-05D	365×195×215	1,9	92/104kW≤A*<245kW
		FQZHN-06D	390×230×255	3,1	245kW≤A*<269kW
		FQZHN-07D	390×230×255	3,4	269kW≤A*
VRF Header		DXFQT4-01	450x240x100	1,4	VRF Header - 4 branches
		DXFQT8-01	755x275x130	3,1	VRF Header - 4 branches

A* = total capacity of indoor units connected to this branch joint. Different values depend on series

Type		Name	Packed Dimensions (mm)	Gross Weight (kg)	Description
Branch joint between heat recovery outdoor unit		FQZHW-02SB1	272×167×232	3,5	For two MV6R series outdoor units connection
		FQZHW-03SB1	472×157×312	6,1	For three MV6R series outdoor units connection
Branch joint between MS BOX unit and outdoor unit		FQZHN-01SB1	257×127×107	0,4	A*<16.8kW
		FQZHN-02SB1	287×137×107	1,0	16.8≤A*<33kW
		FQZHN-03SB1	297×167×177	1,6	33kW≤A*<71kW
		FQZHN-04SB1	372×197×187	2,4	71kW≤A*<104kW
		FQZHN-05SB1	432×222×227	3,5	104kW≤A*
Branch joint between MS BOX and indoor unit		FQZHN-01D	290×105×100	0,4	A*<22.4kW
		FQZHN-02D	290×105×100	0,6	22.4kW≤A*<28kW
Branch joint kit for MS box for 16-28 kW indoor units connection		FQZHN-09A	287x137x107	0,7	16kW≤A*≤28kW

A* = total capacity of indoor units connected to this branch joint

CONTENTS

VRF MV6 ALTO DESIGN

Reliability, power and high efficiency

FROM -25°C TO 24°C
HEATING MODE

ENHANCED
VAPOR INJECTION

FROM -15°C TO 48°C
